INDEX

1. NOISE BARRIERS | VAPOR BARRIERS
   Pipelines, ductworks and valve covers.

2. VIBRATION CONTROL
   Pipe cladding, HVAC and plant rooms.

3. ANTI-CONDENSATION | TEMPERATURE REDUCTION
   Applications exposed to high humidity and surface temperature fluctuations (pipes, walls, building interiors etc.).

4. SPECIALTY PRODUCTS | ACCESSORIES
   Pyrotek supplies a wide range of products to meet different requirements such as adhesives and sealants.

5. PROJECT LIST
   A list of Pyrotek® products that have been applied to building projects around the world.

6. SAFETY DATA SHEETS
   Standard reference documents for chemical, safety and material information.
With ISO 9001 quality system certification, our global engineering team design highly specialised products to every specification and performance requirement. Our products are independently certified, time tested and supported by proven results.
Pyrotek® is a global engineering leader and innovator of performance-improving technical solutions, integrated systems design and consulting services for customers in the aluminium industry. We are also investing and growing rapidly in areas such as glass, noise control and advanced materials.

We have global resources and dependable local support in more than 35 countries with over 80 locations. Our products and solutions are in use around the world in automotive, aerospace, rail transportation and high-tech manufacturing.

Privately-owned since 1956, our deep-rooted values of integrity and collaborative problem-solving uphold our mission to improve customer performance.

**WHO WE ARE**
- A global engineering innovator and supplier of complete end-to-end, performance improving technical solutions
- Our Noise Control division began in Australia, bringing over 30 years experience
- We supply complete turn-key solutions for many industries with over 300 Pyrotek application engineers, worldwide

**WHY CHOOSE US**
- Strong R&D Laboratory Team - ceramic, acoustic & chemical engineers help maximise product performance
- Extensive data analysis and noise predictions
- Design capabilities using CAD and 3D modelling
- Global test laboratories for fire, acoustic and vibration

**OUR INDUSTRIES**
- Building
- Industrial
- Transportation
- Marine
- Oil & Gas
SUSTAINABILITY POLICY

Pyrotek is committed to ethical corporate citizenship and to promote sustainability in its activities and environmental responsibility. We will treat the environment as a valued legacy for our grandchildren. While Pyrotek recognizes that its business activities have environmental and social implications, Pyrotek is committed to mitigate any environmental or social impact its business activities may have through the adoption of best practices and policies. Pyrotek will contribute to the development of a sustainable future through the following principles.

PRINCIPLES
1. Practice responsible corporate conduct through adoption of workplace policies and best practices that meet or exceed regulatory and statutory requirements and that develop and maintain an entrepreneurial and collegial environment.
2. Manage risks, including those related to environmental, social and governance aspects.
3. Identify opportunities to contribute to the development of society and future generations.
4. Provide a safe, healthy and enriching working environment for Pyrotek employees.
5. Be a fair and responsible member of the communities in which Pyrotek operates.
6. As employees and as a company, be ethical and responsible citizens.
7. Be a responsible steward of resources.
8. Adhere to Pyrotek’s Environmental Policy to limit its carbon footprint.
9. Pyrotek encourages the adoption of similar principles by its supply chain and business partners.

Pyrotek reserves the right to amend this policy at any time.
ENVIROMENTAL PRODUCT STATEMENT

OUR COMMITMENT TO SAFETY, QUALITY AND ENVIRONMENT

Pyrotek is committed to safely produce quality products and services, on-time and at a competitive cost. This enables Pyrotek to build a sustainable business for the benefit of our customers, employees and stakeholders. Our focus is dedicated to developing systems with new, more considered operations and materials, as well as committing to improved technologies to further support long-term goals of safety, quality and environment.

Environmental Consideration
We acknowledge the need for consideration for our manufacturing activities to contribute to the mitigation of global warming via energy savings. We locally commit to reducing environmental impact by the prevention of pollution, minimization of waste and reduction of energy and water we use.

Ozone Depleting Potential
Pyrotek has undertaken an audit of its raw materials supplied and manufactured products barrier referencing to the US EPA List of Ozone Depleting Substances (Class 1 and Class 2). To the best of our knowledge, no ozone depleting substances are involved in either the manufacture or composition of these products.

Volatile Organic Compounds (VOC)
Products supplied by Pyrotek do not contain any significant Volatile Organic Compounds (VOCs) content when evaluated to the differing definitions as applied under the Australia National Pollutant Inventory, The Council of the European Union, Council Directive 1999/13/EC or the USA EPA Regulation 40 CFR 51.100(s). We also test to ASTM D5116 showing low VOC release.

Asbestos free manufacturing
Asbestos is not used during the manufacture of, and not added during any process of during the processing of our products. Please contact Pyrotek for available test reports to AS4964.

Global Warming Potential
Pyrotek’s acoustic product range is designed with a reduced carbon footprint in mind, using locally sourced and environmentally-certified materials where possible. We use no CFCs, HCFCs or known high-GWP gases in our manufacturing process.

Recycle and emission care
During the process of manufacture, every care is taken to recycle and reuse material and where possible our plant and equipment has emission cleaners fitted.

Pyrotek has active and ongoing research investment to develop products that reduce environmental impact.
CODE OF BUSINESS ETHICS

POLICY
This Code of Business Conduct and Ethics (the “Code”) represents the commitment of Pyrotek Inc. (which, together with all subsidiaries, is referred to as the “Company”) to conduct its business with integrity, in accordance with all applicable laws, rules and regulations and with high ethical standards. All employees, officers and general managers of the Company are expected to adhere to the principals and procedures set forth in the Code. However, no code can govern all possible situations. Therefore, those individuals governed by the Code must apply the spirit, as well as the letter, of this Code and request guidance from those identified below in the event of any question of interpretation. In all instances, each individual should strive to uphold the integrity and credibility of the Company. This Code is also supplemented by the rules of business conduct and ethics contained in the Company’s other policies and procedures.

Note: This Code is subject to review and modification. The form of the Code made available on the Policies and Procedures Database of the Company supersedes any prior expression of the policy to the extent of any inconsistency. The following sections highlight key scenarios where the Code will govern individual behavior.

PROCEDURE

CONFLICT OF INTEREST
A “conflict of interest” occurs when an individual’s private interests interfere, or appears to interfere, in any way with the interests of the Company. A conflict of interest can arise when an employee, officer or director takes actions or has a personal or non-Company related business interest that may make it difficult to perform his or her Company work objectively and effectively. Conflicts of interest also arise when an employee, officer or director, or a member of his or her family, receives improper personal benefits as a result of his or her position in the Company. Loans to or guarantees of obligations of such persons are of special concern as conflicts of interest. Service to the Company should never be subordinated to personal gain and advantage.

All conflicts of interest as described above are prohibited. Each employee, officer and director should be careful to avoid a conflict of interest by avoiding actions or relationships that may either make it difficult to perform Company work objectively and effectively or affect personal judgment regarding what is in the Company’s best interest.

Any individual who has any questions or concerns regarding this policy, or any specific situations, actions or omissions which may relate to or be prohibited by this policy, is encouraged to discuss such questions or concerns with any of the following individuals: the Company’s (1) President, (2) Chief Financial Officer or (3) Corporate Counsel.

CORPORATE OBLIGATION
Employees, officers and general managers owe a duty to the Company to advance its legitimate interests when the opportunity to do so arises. Each employee, officer and director is prohibited from:

1. Taking for themselves personal opportunities that are discovered through the use of Company property, information or position;
2. Using Company property, information or position for personal gain; or
3. Competing with the Company.
CONFIDENTIALITY
Employees, officers and general managers should maintain the confidentiality of confidential and proprietary information entrusted to them by the Company and its guests and customers, except when disclosure is authorized or legally mandated. Confidential information includes all nonpublic information that might be of use to competitors of the Company, or harmful to the Company or its guests or customers if disclosed.

Employees, officers and general managers are encouraged to consult the CFO, prior to making any disclosure, with any questions regarding whether a legal obligation to disclose confidential information exists. The obligation to maintain confidentiality extends indefinitely after a person’s association with the Company as an employee, officer and director has ended.

FAIR DEALINGS
Each employee, officer and director should endeavor to deal fairly with the Company’s customers, suppliers, competitors and employees. No employee, officer or director should take unfair advantage of anyone through manipulation, concealment, abuse of privileged information, misrepresentation of material facts or any other unfair dealing practice. Nothing contained in this paragraph shall in any way alter any existing legal rights and obligations of the Company or its employees, officers or general managers.

PROTECTION AND PROPER USE OF COMPANY ASSETS
Company employees, officers and general managers should protect the Company’s assets and ensure their efficient use. Each employee, officer and director should endeavor to prevent misuse, loss, damage, sabotage or theft of Company assets. All Company assets should be used for legitimate business purposes only.

COMPLIANCE WITH LAWS, RULES AND REGULATIONS; REPORTING ILLEGAL OR UNETHICAL BEHAVIOR
The Company is committed to complying with all laws, rules and regulations applicable to it, including, but not limited to, those impacting the obligation of the Company to present all financial information to the public in conformance with generally accepted accounting principles based upon information which accurately reflects all relevant facts.

COMPLIANCE AND REPORTING
Employees, officers and general managers should strive to identify and raise potential issues before they lead to problems, and should ask about application of this Code whenever in doubt. Any employee, officer or general manager who becomes aware of any existing or potential violation of this Code should promptly notify the individual responsible for enforcement identified in the Section entitled “Policies and Procedures for Interpretation and Enforcement of the Code”.

POLICIES AND PROCEDURES FOR INTERPRETATION AND ENFORCEMENT OF THE CODE
The President, General Counsel and Chief Financial Officer are responsible for applying this Code to specific situations relating to violations of the Code by general managers and executive officers and to specific situations relating to violations of the Code by other employees which have a material adverse effect on the Company’s overall operations or financial position.

Company management will handle violations of the Code by individuals other than general managers or executive officers in the same manner that other violations of Company policies are handled and it is expected that most violations occurring in the ordinary course of the Company’s business will not be sufficiently material to require report to the Shareholders of the Company or the President.

WAIVERS
From time to time, the Company may waive certain provisions of this Code. Any employee, officer or general manager who believes that a waiver may be appropriate should discuss the matter with the President.
Pyrotek’s mass-loaded vinyl (MLV) noise barriers offer superior acoustic transmission loss. Quadzero™ performs similarly to Wavebar® but with the added fire-resistant foil facing.
**QUADZERO™**

**Quadzero™** is a flame resistant foil faced MLV offering superior acoustic transmission loss with high flame retardant properties. The reflective foil facing provides a low spread of flame surface covering for areas where higher fire specifications are required. Additionally, the dense, thin and strong physical characteristics make Quadzero suitable for building, industrial, transport and OEM sectors. It is also highly suitable for Liquid Natural Gas (LNG) pipe application.

**Features**
- Complies to AS1530.3 & BS 467.6/7 building codes
- Tear resistant with high tensile strength - ability to be suspended at lengths of up to 5 metres
- Available with various laminates such as foams, polyesters and fibreglass

**WAVEBAR®**

**Wavebar®** is a high-performance, flexible mass-loaded vinyl noise barrier, offering superior acoustic transmission loss. Designed to meet market requirements, it has been effectively used to reduce noise in building, commercial, industrial and automotive markets, globally.

The engineering team at Pyrotek® developed Wavebar® to be dense, thin, highly-flexible, tear-resistant and strong. These properties give the product high transmission loss throughout the various weight ranges.

**Features**
- Tear resistant with high tensile strength with the ability to be suspended in lengths of up to 16.4 ft (5 metres)
- Resistant to weather and UV light

**Application**

Quadzero™ and Wavebar® can be installed around LNG and cryogenic pipelines, inside cavities, over lightweight wall/ceilings, adjoining partition walls or as a noise curtain.
QUADZERO™

foil faced flexible noise barrier

Quadzero™ is a high-performance, foil faced, mass-loaded vinyl noise barrier, offering superior acoustic transmission loss and low spread of flame surface covering.

Quadzero™ was developed to meet market noise reduction requirements in the domestic, commercial, industrial and OEM sectors.

To achieve this high-performance, the Pyrotek® engineering team developed Quadzero™ to be dense, thin, strong, tear-resistant and highly flexible. These properties give the product high transmission loss throughout the various weight ranges. It complies with British and international fire and building codes for low spread of flame.

Stiff lightweight panel constructions, such as plasterboard, drywall, plywood and hollow core walls, typically have coincidence dip resonance which allows noise to transmit through a construction. The coincidence dip is dependent on the material’s stiffness and thickness and occurs at the point where the sound transmitted through the structure matches the natural frequency of the panel.

Quadzero™ shifts the coincidence dip to frequencies limiting its impact, thereby maintaining the performance of the product. The thin, dense mass Quadzero™ barrier reflects and absorbs the transmission of sound through walls, ceilings and floors, reducing the critical frequencies generated from mechanical equipment, engine noise and electronic audio devices.

VOC STATEMENT
Quadzero™ products contain no ozone-depleting substances and comply with European and Australian standards for Volatile Organic Compound emissions.

SPECIFICATIONS

<table>

applications

- Inside cavities or over lightweight wall, ceiling and floor constructions. Ideal for home theatres, office partitions, meeting rooms.
- Over roof joists to reduce aircraft, rail and traffic noise.
- Applied between the plenum chamber of a floor slab, roof and adjoining partition walls.
- Installed around the outside of metal air ducts to reduce noise break-out.
- Wrapped around noisy pipes, valves and fan casings e.g. fluid or gas pulsation in chemical, petrochemical, wastewater treatment plants and oil & gas pipelines.
- Automotive firewalls to reduce engine and road noise transmitting through the structure.
- Rail carriages for under floor insulation to reduce track and braking noise.

features

- Complies to AS1530.3 & BS 467.6/7 building codes
- Free from lead, odour-producing oils and bitumen
- Can be fitted around challenging places
- The foil facing also makes it easy to bond onto other substrates using matching Tape ALR adhesive or equivalent.
- Simple to cut, sew, tape and mechanically fasten
- Resistant to water, oil and natural weather conditions
- Tear resistant with high tensile strength. Ability to be suspended in lengths of up to 5 metres
- Available with various laminates such as foams, polyesters and fibreglass

Testing was conducted using Wavebar®.
Wavebar® is a high-performance, flexible mass-loaded vinyl noise barrier, offering superior acoustic transmission loss. Designed to meet market requirements, it has been effectively used to reduce noise in building, commercial, industrial and automotive markets, globally.

The engineering team at Pyrotek® developed Wavebar® to be dense, thin, highly-flexible, tear-resistant and strong. These properties give the product high transmission loss throughout the various weight ranges.

Stiff lightweight panel constructions, such as plasterboard, drywall, plywood and hollow core walls, typically have coincidence dip resonance which allows noise to transmit through a construction. The coincidence dip is dependent on the material’s stiffness and thickness and occurs at the point where the sound transmitted through the structure matches the natural frequency of the panel. Wavebar® shifts the coincidence dip to frequencies limiting its impact, thereby maintaining the performance of the product.

The dense core mass layer reflects and absorbs the transmission of sound through walls, ceilings and floors, reducing the critical frequencies generated from mechanical equipment, engine noise and electronic audio technologies such as radio and television.

VOC STATEMENT
Wavebar® does not contain any Volatile Organic Compounds (VOC) when evaluated according to definitions as applied under the Australia National Pollutant Inventory, The Council of the European Union, Council Directive 1999/13/EC or the USA EPA regulation 40 CFR 51.100(s).

APPLICATIONS

- Inside cavities, over lightweight wall and ceilings.
- Ideal for home theatre rooms, office partitions, meeting rooms.
- Between the plenum chamber of a floor slab, the roof and adjoining partition walls.
- Isolate sound on doors for privacy.
- Position as a curtain to separate and create an acoustic barrier for open floor plans.
- Automotive cabin application to reduce engine and road noise transmitting through to passengers.
- Laminate to lightweight structures.
- Acoustic treatment for oil & gas pipelines.

SPECIFICATIONS

- Colour: Black
- Packaging (Standard): Width: 1380 mm, Length (linear m): 5 - 10 m, Weight (kg/m²): 2, 4, 6, 8, 10, Custom depending on MOQ

FEATURES

- Simple to cut and install through obstructions - providing flexibility around pipes, ducts, cables etc.
- Resistant to most chemicals, solvents and petrol.
- Free from lead, odour-producing oils and bitumen.
- Resistant to weather and UV light.
- Tear resistant with high tensile strength. Ability to be suspended in lengths of up to 5 metres.
- Available in various weights, widths, roll lengths and sheet sizes.
- Available with various laminates such as foil, metallised film, foams and polyesters.

Quadzero™ MVT reduces the impact of unwanted sound, offering a 2-in-1 barrier product to combat noise and vapor transmission.
QUADZERO™ MVT

Quadzero MVT is a foil-faced, mass-loaded vinyl developed to meet moisture vapor transmission (MVT) resistance in liquefied natural gas (LNG) and cryogenic pipelines. It also serves as an acoustic barrier to assist in reducing noise. Pipeline operating and ambient temperatures can create perfect conditions for moisture buildup inside insulated equipment. The low permeability properties of Quadzero MVT blocks moisture entry into the insulation system, maintaining its thermal performance, and preventing corrosion under insulation (CUI).

Quadzero MVT requires minimal effort to install and has been independently tested for noise and vapor transmission. As a strong vapor and noise barrier layer solution, Quadzero MVT can easily be adjusted to fit around pipe insulation systems. It is flexible, tear-resistant, and is available in various sizes and weights.

Features

• Low vapour permeability - maintaining thermal performance of the insulation
• 2-in-1 solution: vapor barrier and noise barrier
• Simple to cut and install, providing flexibility around LNG pipes or other similar applications
• Resistant to weather and UV light
• Tear resistant with high tensile strength
• Available in various weights, widths, roll lengths and sheet sizes
• The foil facing makes it easy to bond onto other substrates using matching Tape ALR adhesive or equivalent

Application

• Liquefied natural gas (LNG) and cryogenic pipes
• Wrapped around other noisy pipes, valves and fan casings e.g. fluid or gas pulsation in chemical, petrochemical and waste water treatment plants
• Compressor jackets where acoustic and thermal treatment is required
Technical Datasheet
Quadzero™ MVT is a foil-faced, mass-loaded vinyl developed to meet moisture vapor transmission (MVT) resistance in liquefied natural gas (LNG) and cryogenic pipelines. It also serves as an acoustic barrier to assist in reducing noise.

Noise generated from pipelines has been subjected to regulations and restrictions. As an acoustic solution, Quadzero™ MVT reduces the impact of unwanted sound, offering a 2-in-1 barrier product to not only combat noise, but also vapor transmission.

Pipeline operating and ambient temperatures can create perfect conditions for moisture buildup inside insulated equipment. The low permeability properties of Quadzero MVT blocks moisture entry into the insulation system, maintaining its thermal performance, and preventing corrosion under insulation (CUI).

Quadzero™ MVT requires minimal effort to install and has been independently tested for noise and vapor transmission. As a strong vapor and noise barrier layer solution, Quadzero™ MVT can easily be adjusted to fit around pipe insulation systems. It is flexible, tear-resistant, and is available in various sizes and weights.

**Flexible foil-faced vapor barrier**

**Applications**
- Liquefied natural gas (LNG) and cryogenic pipes
- Wrapped around other noisy pipes, valves and fan casings e.g. fluid or gas pulsation in chemical, petrochemical and waste water treatment plants
- Compressor jackets where acoustic and thermal treatment is required

**Features**
- Low vapor permeability - maintaining thermal performance of the insulation
- 2-in-1 solution: vapor barrier and noise barrier
- Simple to cut and install, providing flexibility around LNG pipes or other similar applications
- Resistant to weather and UV light
- Tear resistant with high tensile strength
- Available in various weights, widths, roll lengths and sheet sizes
- The foil facing makes it easy to bond onto other substrates using matching Tape ALR adhesive or equivalent

Testing was conducted using Wavebar®

Report Number: 263c, 264c, 265c & 189(rev1)c

Tested to ISO 15186-1:2003 & 10140-4:2010 at University of Canterbury, New Zealand

*Results for Quadzero
WAVEBAR® | QUADZERO™ RANGE

This installation guide provides recommendations to maximise the service life of Wavebar®, Quadzero and Quadzero MVT for LNG and cryogenic pipe applications.

KEY INSTALLATION REQUIREMENTS

- Attention to detail and good workmanship in cutting, applying and fixing the product on to the pipe is essential.
- Coverage of the pipe insulation being treated must be continuous.
- Coverage will vary depending on the pipe or insulation diameter.
- There should be no gaps at joints or edges.
- The smallest gap at any joint will result in performance loss.
- Fixseal MSP15 is the recommended joint sealant for Wavebar.
- Tape ALR or equivalent tape is recommended for Quadzero and Quadzero MVT.
- Ensure pipe and pipe insulation work surface is clean and dry before installing product.
- It is essential to ensure the material is clean and dry even when stored for an extended period of time. It must also be free from oil, dirt,rips or tears.
- Do not overstretched Tape ALR when applying as this will create buckles and voids in the contact area.

DESCRIPTION

- The Wavebar® and Quadzero range are dense, flexible noise barriers that reflect unwanted sound.
- Quadzero MVT is a 2-in-1 solution offering a noise and vapour barrier.
- Coverage will vary with the pipe diameter.

WORKING HEALTH AND SAFETY

- Personal Protection Equipment (PPE) is recommended.
- Always follow, read and understand any information contained within the product technical datasheets and safety data sheets.
- If unsure, please consult with your local Pyrotek representative regarding the application of the product.

Note: This installation is only suitable for professional and experienced users only.

Pyrotek offers noise barriers and vapour barriers (Quadzero MVT) for liquefied natural gas (LNG) and cryogenic pipelines.

APPLICATIONS

- Liquefied natural gas (LNG) and cryogenic pipes treated with insulation
- Wrapped around other noisy pipes, valves and fan casings e.g. fluid or gas pulsation in chemical, petrochemical and wastewater treatment plants
- Compressor jackets for both acoustic and thermal is required

HOW TO MEASURE AND CUT MATERIAL

For Straight Pipe Sections

Measure the length (L) and outside diameter (OD) of the pipe requiring lagging.

Apply the following formula to calculate and cut the required wrapping width (W):

\[ W = \pi \times (OD + (2 \times T)) + 50 \text{ mm} \]

Where:
- \( W \) = total thickness of acoustic insulation
- \( \pi \) = 3.14 (pi)
- \( OD \) = outside diameter of the pipe or insulation being treated.

Mark the calculated width (W) along the length of the roll and cut material with a retractable utility knife or equivalent.
Always cut from the foil faced side of the material.
GENERAL INSTALLATION OF PIPES

STEP 1
• Roll out the product to an appropriate length and measure the coverage required to fit around the pipeline insulation. Please refer to “How to measure and cut material” formula on page 1.
• Once measured, cut the product with an appropriate retractable utility knife or equivalent.
• It is highly recommended to allow at least a 25 mm to 100 mm overlap when wrapping around the pipe or insulation being treated. A tight seal around all joints and edges is critical to attain maximum performance.

STEP 2
• Ensure pipe work surface is clean and dry before installing product.
• Line up product towards the pipe area and wrap the product around the pipe.
• Ensure the front of the product is on the exterior.
• Recommended overlap when applied.

STEP 3
• For Wavebar® - it is recommended to use Fixseal MSP15 for the joint sealant. Apply the sealant across the joints and edges to create a tight seal. Hold firmly and apply pressure for maximum bonding.
• For Quadzero and Quadzero MVT - Pyrotek can provide Tape ALR on request. Apply the tape centrally over the sections to be joined and press firmly along the entire tape surface.
• Wipe or rub the tape with firm pressure across the tape with a cloth or equivalent to smooth out any air bubbles or buckles.
• Tape ALR is a high-quality self-adhesive insulation joining tape. The pressure-sensitive reinforced aluminium foil tape is designed to serve as a joining or covering tape for Pyrotek’s foiled-faced products. Please refer to Tape ALR technical datasheet for more information.
• Do not overstretched the tape when applying as this will create buckles and voids in the contact area.

STEP 4
• Mechanically fasten with an approved strap or equivalent after fitting to reinforce the performance of the product.
• All joints along longitudinal pipe sections must be fitted with an overlap for each segment. Continue wrapping with an overlap until the whole section is covered with the joint treatment and mechanical fixing.

NOTE: All information above only serves as a general guideline for installing Wavebar®, Quadzero and Quadzero MVT around pipeline insulation in LNG and Offshore applications. Installation may vary in a case-by-case situation.

Please contact Pyrotek® for further information or detailed advice on your specific application.
Brochure
FLEXIBLE ACOUSTIC NOISE BARRIER

WAVEBAR AND QUADZERO RANGE

BUILDING - INDUSTRIAL - TRANSPORT - MARINE - OIL & GAS

SOUNDPROOFING SOLUTIONS FOR ALL INDUSTRIES
pyroteknc.com
MASS LOADED VINYL FOR ALL INDUSTRIES

The mass loaded vinyl (MLV) range has been uniquely developed by Pyrotek’s world class engineering team. Offering superior acoustic transmission loss - Wavebar® and Quadzero™ are flexible reinforced noise barrier solutions that meet global market requirements in all industries including building, industrial, transport, marine and oil & gas.

**Wavebar®** is a reinforced MLV noise barrier designed by Pyrotek to meet market requirements and effectively reduce noise transmission. Due to its flexible and tear resistant properties, Wavebar is suitable for various applications across all industries, such as building, commercial, industrial and transport. Wavebar will help improve performance of a lightweight partition at critical frequencies.

Wavebar® NC is a tear resistant noise barrier curtain with high tensile strength. The tarpaulin base fabric facing is used to withstand tough weather conditions in addition to being UV resistant. Able to withstand exposure to most chemicals and solvents, Wavebar NC is easy to hang or drape in long lengths – being the ideal choice for outdoor use, oil and gas industries and construction sites. It can also be combined with absorption materials, offering versatility in challenging noise environments. The tarpaulin base fabric facing is available in various colours.

Wavebar® dBX is the latest alternative in noise barrier technology manufactured from thermoplastic recycled polymers. A self-extinguishing and low smoke emission noise barrier, Wavebar® dBX provides high-performance acoustic insulation that can be vacuum formed and easily moulded. This product is 100% recyclable and recommended for transport, building and industrial applications due to its strong characteristics.

Our Wavebar® and Quadzero™ range perform an important role as high-performance barriers where noise transmission issues need to be addressed. Typically stiff lightweight panels such as plasterboard, drywall, plywood and hollow core walls have a coincidence dip. A coincidence dip is the frequency at which the stiff panel vibrates in unison with the frequency of sound pressure waves. The frequency of the coincidence dip is dependent on the material’s stiffness and internal damping properties causing a degradation in transmission loss. The Wavebar® and Quadzero™ range will eliminate the impact of the coincidence dip when installed in a structure, rendering it as a highly effective noise barrier.
Quadzero™ NL is a foil faced barrier that is formulated to achieve the highest fire rating as an acoustic surface covering. It is durable, flexible and tear resistant, with a strong base fabric. This product offers optimum noise transmission loss with fire testing results that complies with international marine and rail standards. Quadzero NL is suitable for marine and rail carriages in walls, ceilings and under floor insulation, as it contains no ozone depleting substances, lead, unrefined oils or bitumen.

Quadzero™ dBX is a MLV laminated with reinforced aluminium foil, manufactured from thermoplastic recycled polymers that exhibits superior transmission loss. Meeting international standards for rail, transport and marine, Quadzero dBX has high fire resistant properties, a low spread of flame surface and low smoke development. This product is suitable for marine, transport and rail applications. Quadzero™ dBX is 100% recyclable.

Wavebar® is weather resistant, contains no ozone depleting substances and complies with International standards for Volatile Organic Compound (VOC) emissions.
Quadzero™ is suitable for ceiling cavities due to its reflective and low spread of flame surface covering. Wavebar® fitted between plasterboard walls for greater transmission loss. Improves performance at critical frequencies generated from urban and environmental noise impact.

Wavebar® and Wavebar® dBX fitted in the plenum space above suspended ceilings and partition walls to avoid flanking noise.

Quadzero™ NL and Quadzero™ dBX will effectively control sound transfer from external track, rail or engine noise into cabins and carriages. This durable product can be used without impacting carriage safety providing additional comfort to passengers.

Quadzero™ NL and Quadzero™ dBX can be installed in the wall linings, deckheads and bulkheads of marine vessels to reduce sound transmission emitting from the vessel engine room.
Pyrotek’s **Wavebar® & Quadzero™** range are available in various weights, widths, roll lengths and sheet sizes. Our MLV products are simple to cut and easy to install.

**Industrial**

Wavebar® NC can be conveniently draped over fencing as an acoustic barrier to reduce noise transmission around construction sites, building sites and mobile equipment.

Wavebar® NC can be easily fabricated and sewn to make custom enclosures to reduce noise transfer from generator sets, plant rooms, printing machines and other heavy equipment.

**LNG Pipes**

Lagged around pipes, Wavebar® & Quadzero™ are important for LNG (Liquid Natural Gas) pipe applications to prevent noise breakout.

Wavebar® complies to the ISO 15665 (Group 2 Pipe size) test method.
Suited across a variety of applications, the mass loaded vinyl range offers superior acoustic transmission loss and complies to a range of international fire codes benefiting the following areas:

Decidamp® SP80 effectively absorbs and dissipates vibrational energy from the flexural stress of the base structure to reduce panel coincidence and resonance effects.
Decidamp® SP80 is a lightweight, non-toxic structural damping material that is suitable for exterior and interior use and anywhere that noise can impact structural longevity, comfort and function.

Decidamp® SP80 is a superior extensional damping compound and is suitable to be applied directly to structures (steel, fibreglass and alloys) where sound damping is required. Available in grey (standard) or other colours can be ordered depending on MOQ.

**Fast drying formula**

### Features

- Advanced, non-sag formulation
- Excellent adhesion to most surfaces
- Water-based - non toxic, solvent free, low VOC
- Excellent flame resistance, ignition retardant
- Designed for damping across broad temperature and frequency range
- Reduces resonant vibration and eliminates tinniness and ringing
- Easy application and clean up (Sprayable)
- Can be painted/gel coated over, once cured
- Cures to chip resistant finish

### Application

- Oil and gas: pipe cladding
- Building: metal roofing, floors wall cladding
- Enclosures for machinery and industrial equipment
- HVAC, plant rooms, substations
- Stainless steel applications (sinks, bowls)
- Garbage chutes and other utilities where suitable

**DECIDAMP® SP80**
**SOUNDSTEEL MPM**

*Soundsteel MPM* is a fully damped steel composite comprising two outer layers of steel that is laminated together using a layer of a viscoelastic polymer. The function of the viscoelastic interlayer is to damp disturbing structure-borne sound.

Soundsteel MPM can be used in severe environments where other damping materials cannot withstand. When exposed to harsh environments, SS316 offers considerably high heat and corrosion resistance when compared to other grades of stainless steels.

**Features**

- Able to fabricate using conventional machine shop tools
- Cut, form and join just like plain aluminium
- Maximum damping with minimum thickness

**SOUNDALLOY MPM**

*Soundalloy MPM* is a damped aluminium composite comprising two layers of aluminium laminated together using a layer of a viscoelastic polymer.

Soundalloy MPM is free from resonance and coincidence phenomena which often detract from the performance of other acoustic insulation materials.

Soundalloy MPM can also be used in severe environments which other materials cannot withstand.

**Features**

- Various configurations of metal thicknesses
- Able to be die cut and formed into complex shapes
- Able to fabricate using conventional machine shop tools

**Application**

Soundsteel MPM and Soundalloy MPM can be used as metal claddings for pipes in the LNG industry, in engine rooms for high-speed craft/vessels, machinery equipment, compressors, or generator set enclosures.
Technical Datasheet
Decidamp® SP80 is a fast drying, water-based viscoelastic vibration damping compound. The advanced formula is optimised to suit building applications providing an acoustic improvement of structures that are exposed to vibrations and impact noise. Developed with a special polymer technology, Decidamp® SP80 is a lightweight, non-toxic structural damping material that is suitable for exterior and interior use. It can be applied almost anywhere that noise can impact structural longevity, comfort and function.

With exceptional fire properties and compliance to international fire codes, it performs across several industries and is now developed for building applications. Decidamp® SP80 is easy to apply by simply spraying, rolling or trowelling onto surfaces. Once dry, the cured film is UV, water and chip resistant and effectively damps noise. Decidamp® SP80 is a superior extensional damping compound and is suitable to be applied directly to structures (steel, fibreglass and alloys) where sound damping is required. Available in grey, as standard, or other colours can be ordered.

**SPECIFICATIONS**

**applications**

- Metal roofing, floors and wall cladding
- Enclosures for machinery and industrial equipment
- HVAC, plant rooms and substations
- Stainless steel applications (sinks, bowls)
- Hospital equipment
- Whitegoods and dishwashers
- Back of house, garbage chutes, and utilities
- LNG pipe

**features**

- Advanced, non-sag formulation
- Excellent adhesion to most surfaces
- Water-based, non-toxic, solvent-free, and low VOC
- Excellent flame resistance, ignition retardant
- Designed for damping across broad temperature and frequency range
- Reduces resonant vibration and eliminates tinniness and ringing
- Easy application and clean up (Sprayable)
- Can be painted/gel coated over once cured
- Cures to a chip-resistant finish
- Fast drying formula

ACOUSTIC PERFORMANCE

Decidamp SP80

Tested to ISO 6721-5:1996
Report Number: 121716AR

How to read a reduced frequency nomogram:
1. Start by selecting the frequency (Hz) on the right-hand vertical axis.
2. Follow this value horizontally to the left to where the diagonal temperature isotherm intersects.
3. Draw a vertical line through the frequency and isotherm intersection, find the point where this line intersects the modulus and loss factor curves.
4. Draw horizontal lines from these points to the left-hand vertical axis to read the values.
Soundsteel® MPM is a fully damped steel composite comprising two outer layers of steel, laminated together using a layer of a viscoelastic polymer, to form the laminate.

Using the “constrained layer” principle, the function of the viscoelastic interlayer is to damp disturbing structure borne sound.

Soundsteel MPM is free from resonance and coincidence phenomena which often detract from the performance of other acoustic insulation materials.

Soundsteel MPM can be used to fabricate acoustic doors, laundry and garbage chutes, ducts, enclosures, extraction hoods, and automotive components such as valve covers & oil sumps. Because of the steel base material, Soundsteel MPM can be used in severe environments where other damping materials cannot withstand.

The standard product is supplied with an electro-galvanised finish, and available in various metals and surface finishes. Using electro-galvanised, cold-rolled, low carbon steel allows the laminate to be used as a structural material in equipment construction.

Soundsteel MPM is also available with a choice 304 and 316 stainless steel grades, with surface finish of either polished, brushed or polyethylene (PE) coating for additional scratch resistance. When exposed to harsh environments, SS316 offers considerably high heat and corrosion resistance when compared to other grades of stainless steels.

Note: Powder-coated panels should not be bent. Bending should be completed on plain panels and painted on site. We recommend conducting trials on small sample pieces first.

### Applications
- Engine rooms for high speed craft/vessels
- Machinery and equipment, compressor and generator set enclosures
- Acoustic hoods and chutes
- Conveyor systems
- Crushers / Granulators
- Coin counters
- Air conditioner casings
- Automotive sumps and panels
- Acoustic wall panels and doors
- LNG cladding

### Features
- Maximum damping for minimum thickness
- Complies to IMO FTP 2010 - low spread of flame
- Can be used as part of the "main structure"
- Cut, form and join just like plain aluminium
- Insulates against air-borne sound, impact and vibration
- Able to be painted & powder coated - best results from the manufacturer for powder coating
- Effective "in-structure damping"
- No need for external damping materials
- Reduces or eliminates need for use of external isolators
- Lightweight damped structures
- Broad temperature range (-40°C to 110°C)
- Able to fabricate using conventional machine shop tools
- Available with a choice of polished, electro-galvanised, brushed or polyethylene (PE) coated surface finishes
- Able to be die formed into complex shapes
- Various configurations of metal thicknesses available from 1 mm - 6 mm

*Results shown have been calculated using transmission loss software. Base data was compiled from several years of acoustic testing. The software uses well known acoustic formulas. Values given are within 1-2 dB of actual test data. Variation will always occur in test data and predictions. This is due to variations in material properties, different methods and standards.

System Loss Factor Tested to ISO 6721-3:1994 - Report No. 25111 - Mk1
Transmission Loss (Tested to AS1191 | NAL Report No. ATF-142

System loss factor is a dimensionless figure representing how well a particular system is damped. Standard ASTM E756-23/ISO 6721-3 is used to test for system loss factor. A system is a combination of the substrate, be it steel, aluminum or fiberglass and the damping material itself. System loss factor is system specific, hence the composition of the tested system needs to be provided.

DECIDAMP® SOUNDPAINT

This Installation Guide provides recommendations to maximise the service life in various applications.

KEY INSTALLATION REQUIREMENTS

Decidamp Soundpaint is a high-performance, fast drying, water based viscoelastic vibration damping compound, specially formulated for easy application and maximum performance.

SURFACE PREPARATION

This product is specifically formulated to provide high adhesion to difficult substrates such as uncoated aluminium, however adequate surface preparation is essential.

- Remove any dust, dirt, oil, grease, rust, mould-release agent, etc. from the surface using a suitable solvent.
- Abrading the surface by wire brushing, sandblasting or abrasive paper is recommended for highly polished surfaces.
- On steel substrates, surface priming is recommended to prevent flash rusting.

APPLICATIONS

- Marine: Boat hulls, ceilings, decks and bulkheads
- Machinery and industrial equipment enclosures
- HVAC, plant rooms, substations
- Exit ways, smoking areas, stairwells
- Rail: locomotives, carriages, high speed trains
- Automotive, trucks and bus underbodies
- Heavy earthmoving equipment
- Stainless steel applications (sinks, bowls)
- Hospital equipment
- Whitegoods and dishwashers
- Metal floors, deck roofing, wall cladding

This advanced formula was developed for acoustic improvement of structures that are exposed to vibration and impact.

It effectively absorbs and dissipates vibrational energy from the flexural stress of the base structure to reduce panel coincidence and resonance effects.

METHODS OF APPLICATION

Decidamp Soundpaint can be applied using the following methods:

- Trowel: Simply apply and smooth as required.
- Brush: For brush applications, we recommend adding 0.3% of water by weight per kg of product. This will assist in easier and smoother application. Use a wide 100mm thick nylon bristle brush. Keep brush well loaded with Soundpaint and use short strokes, applying a thick coat of approximately 2-3mm. Avoid “painting” back and forth as this will cause the coat to become too thin.
- Roller: For roller applications, we recommend adding 1% of water by weight per kg of product. This will aid in an easier and smoother application. Using a short knap cloth roller, roll with short strokes, and try to avoid rolling back and forth, as this will cause the coat to become too thin. Use a light brush to “tip-off” the stipples if desired.
- Air assisted and Airless spray systems: Four main spray systems are available for the application of Soundpaint. (stated overleaf)

Please refer to our website pyroteknc.com for the latest information
Ensure proper preparation, mixing and application for best results. Decidamp® Soundpaint should always be applied to surfaces that are clean, dry and free of contaminants.

MIXING & APPLICATION

Mix thoroughly before application, using a ribbon or paddle mixer as shown. The product should be mixed until it is a smooth creamy consistency.

If required, the viscosity of the product can be altered by the addition of 0.3% of water by weight per kg of product. Should be applied above ambient temperatures of 10°C.

DRYING TIMES

For best results, allow the compound to dry naturally as force drying may result in cracking of the coat. In cold conditions, substrate can be warmed to aid drying. Forced ventilation can be used to help coating dry. Air movement should be both in/out during drying process.

<table>
<thead>

<td>24 – 96 hours</td>
</tr>
<tr>
<td>Complete dry</td>
<td>24 – 72 hours</td>
<td>24 – 96 hours</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Note, drying times are a guide only. Testing should be performed by the end user, as end use conditions (thickness of application, substrate type, temperature and humidity) will effect this greatly.

APPLICATION RATE & COVERAGE

Can be applied up to 6mm wet film (achieves approx. 5.2mm DFT) per coating session without slumping. Typically, Decidamp is built up over two sessions of 3mm wet coats, allowing 20-40 minutes between each application.

For best damping performance, the following application thicknesses are recommended:

- Dry coating thickness steel: >1.0 x substrate thickness
- Dry coating thickness aluminium: >0.5 x substrate thickness
- Dry coating thickness FRP: >0.3 x substrate thickness

To achieve a desired dry film thickness, provision for material shrinkage of up to 15% on average should be included when applying wet coating.

Note, specifications or specific requirements of an installation may supersede these recommended thicknesses.

Resistant to water spray or immersion up to 12 hours, however if this is anticipated, Decidamp should always be sealed with a suitable commercial waterproof sealant/coating, applied well after complete curing of the material.

WET GAUGE FILM THICKNESS CHECK

To ensure the correct film build is achieved, a wet film gauge can be used (right).

Includes allowance for up to 15% material shrinkage

Substrates: Can be used on Steel, Aluminium, GRP/FRP Laminate, GRP/FRP.

Water resistant: Decidamp SP150, SP450, SP500 varieties are water resistant, however where regular exposure is expected, Soundpaint should always be sealed with a suitable commercial waterproofing sealant/coating, applied well after complete curing of the material.

Shelf life and Storage: 24 months from receiving goods (when stored under recommended conditions). Product to be stored and transported between 10 and 45°C. Do not allow to freeze. Partially used pails of product can be reused, if sealed firmly after first use. Opened product should be resealed and used within 2 months (Frequent opening of seal must be avoided)

Clean up and Safety: Equipment easily cleaned with water. Personal Protection Equipment (PPE) including eye protection, gloves and safety clothing are highly recommended.

Please contact Pyrotek for further information or detailed advice on your specific application.
SOUNDSTEEL / SOUND ALLOY

This Installation Guide provides recommendations for working on Soundmetal panels ie joining, bending, welding and fastening.

WORKING HEALTH AND SAFETY

- Make sure that the premises are well ventilated when welding panels.
- Personal Protection Equipment (PPE), including eye protection, gloves and safety clothing is recommended. Refer to MSDS, use in a well ventilated area.

Note: This product is suitable for professional and experienced users only.

CONDITIONS BEFORE WORKING ON PANELS

All panels must be at room temperature (15°C - 35°C) before they can be worked on. If you have no heated storage space, the panel must be brought into heated premises at least 24 hours prior to any working operations. If the temperature of the panel is below room temperature, bending and like operations may cause the thermoplastic layer to separate from the facing.

PROCESSING PANELS

CUTTING:
Panels are easily cut with guillotine shears. Cutting edges should be well sharpened. Set the clearance between cutting edges as for a sheet metal thickness equal to 60% of the thickness of the panel. Standard MPM panels come with outer layers of equal thicknesses. Panels with outer layers of unequal thickness, should be cut with the thinner side facing up. MPM panels can also be laser cut. Water jet cutting is not recommended.

SAWING AND SLOTTING:
If the panel is to be sawn or slotted with a cutting wheel or similar tool, it should first be spot or tack welded on both sides of the cutting line. Use minimum heat.

BEADING AND FLANGING:
These operations can be performed in the same way as with single sheets of metal. As the operation takes place under compressive force, there is no risk of separation at the edges of the panel.

PUNCHING:
Any drilling or piercing should be done after bending, as the holes will otherwise be displaced.

BENDING:
Panels can be bent and edged without trouble provided that a few essential points are kept in mind. The bending radius should be at least 1.5 - 2.0 times the thickness of the panel. For best results with heavier-gauge panels, the radius of the die should be slightly larger than that of the tool.
When bent, it behaves like two sheets of metal lying loosely one on the other, and the facings are displaced by the difference in bending radius between the inner and outer facing.

Pyrotek’s ‘Soundmetal’ range of products include two standard damping sandwich panels - Soundalloy™ MPM (Refer to TDS ‘111IP’) and Soundsteel® MPM (Refer ‘121IP’).

applications

- Engine rooms for high speed craft/vessels
- Machinery and equipment, compressor and generator set enclosures
- Acoustic hoods and chutes
- Conveyor systems
- Crushers / Granulators
- Coin counters
- Air conditioner casings
- Automotive sumps and panels
- Acoustic wall panels and doors

Please refer to our website pyroteknc.com for latest information
PROCESSING PANELS (cont.)

BENDING (cont.)
The amount of displacement can be calculated according to the formula:

\[
\delta = \alpha \times \frac{n}{180} \times (R_{II} - R_l) \text{ mm}
\]

where \(\delta\) = displacement
\(\alpha\) = bending angle in degrees
\(n\) = number of bends
\(R_l\) = bending radius of inner facing \(t_1\)
\(R_{II}\) = bending radius of outer facing \(t_2\)
\(t_1\) = thickness of facing nearest tool
\(t_2\) = thickness of facing nearest die
\(p\) = thickness of plastic inlay

As a result of the displacement, you cannot make several successive bends without taking certain precautions. Always bend nearest a free edge to allow for displacement. If you bend on the side nearest a bent edge, the layers of the panel will split apart.

Note: Powder-coated panels should not be bent. Bending should be completed on plain panels and painted on site. We recommend conducting trials on small samples pieces first..

JOINING & FASTENING

MPM panels are readily joined by both resistance and arc welding.

Weldability of MPM Panels
Care must be taken to adjust current settings and to use the correct clamp design to form an electrical bridge between the two sheets of the sandwich system. In all welding operations you should try to limit both the duration and extent of heating of the thermoplastic inlay.

Resistance Welding
MPM panels lends itself well to resistance welding. The strength of the joints is equivalent to that normally obtained in solid steel sheet welding.

Before resistance welding begins, the insulating plastic inlay must be punctured. This is most easily done by making a centre punch mark under the first spot. For heavier gauge panels you can use a clip or clamp. Once electrical contact is established between the metal facings, no further punch marks are needed. (See fig RW1)

The electrode pressure should be increased by 50-80 % compared to solid metal; this is to ensure that the spot will penetrate the plastic inlay and deform the facings to establish electrical contact. The power should be increased by 20% compared to solid sheeting of the same thickness. With small spot welders developing less than 35kVA, the welding time should be prolonged.

When long edges are spot welded to prevent the panel from splitting apart, the intervals between spots should not be longer than 5cm (2inches) and shorter than that for asymmetrical panels.

Seam Welding
An overlapping form of spot welding is also a suitable method. Bolts, brackets and similar fittings can also be welded to the panel by application of double electrodes on the same side of the panel. In such cases, it isn’t necessary to puncture the inlay.

`Make sure that premises are well ventilated when you weld MPM panels.`
VARIOUS TYPES OF JOINT

Fillet Welding to a heavier gauge material or between panels
First secure the edges of the MPM panel with spot welds. Continuous fillet welds should be avoided. Joints 15mm long, spaced 20mm apart are right. Intermittent fillet welding in a staggered pattern gives best results.

Butt Welding
Edges of the MPM panels should first be secured by spot welds and then built up as shown in the three figures.

Plug Welding
Panel edges should first be secured by spot welds. Welding data should be selected according to the thickness of the panel. Basic electrodes are recommended. (See fig. PW1)

Corner Welding
Locate the panels so that one covers the thermoplastic inlay of the other one. (See fig. CW1)

Make sure that premises are well ventilated when you weld MPM panels.

Please contact Pyrotek® for further information or detailed advice on your specific application.
Decidamp® SP (Soundpaint) is a water-based, extensional damping compound designed to reduce impact-generated noise and address resonant vibration at its source. The viscoelastic properties effectively damp and dissipate vibrational energy to alleviate flexural stress of base structures, which can greatly assist in the prevention of metal structural fatigue. Our advanced formula was developed for acoustic improvement in marine vessels, rail carriages, vehicle chassis and other structures that are exposed to vibration and impact.

The Decidamp® range was developed to reduce structural-borne noise, metal fatigue and flexural or dynamic stress of structures.

**VIBRATION DAMPING TO REDUCE NOISE & LESSEN STRUCTURAL FATIGUE**

Structures with minimal internal damping properties can resonate on impact or when exposed to other momentary forces. If not effectively damped, structure borne vibration is converted to airborne noise. Increased damping in a structure will reduce vibration, noise transfer and structural fatigue. Effective damping can achieve greater than 20 dB reduction in noise.

**FEATURES**

- Certified to International Maritime Organization (IMO) fire safety standards
- Certified to European Standards EN45545-2 for railway applications
- USCG (United States Coast Guard) approved
- ClassNK (Nippon Kaiji Kyokai) approved
- Lightweight and easy to apply
- Faster drying with no slumping
- Contains no ozone-depleting substances
- Water-based, anti-corrosion and chip resistant properties
- Low consumption rate, high damping performance
- High build rate, with the ability to apply 2 mm thick in one single coat
- Seamless damping solution

*Available in pails and drums according to project size and customer requirements.*

**WATER-BASED VIBRATION DAMPING COMPOUND**

50% quicker application

Address structural fatigue in engines, underbody and surrounds.
Lightweight, less shrinkage
across every industry and application

DECIDAMP SP80  Suitable for architectural, building and industrial use

Tested to British Standards - BS 476 Part 6 & 7 - Complies with Class 0.
- Easily applied to any contoured, horizontal or vertical surface
- Apply up to 2 mm in one spray application
- No odour and low Volatile Organic Compound (VOC)

DECIDAMP SP150  Designed for marine and offshore applications

- Wheelmark approved for Marine Industry
- International Marine Organisation (IMO) (fire) approved coating of up to 10 mm thickness therefore highly suitable for thick substrates
- No slumping upon correct application, faster drying
- Can be painted or gel coated over

DECIDAMP SP450 | SP500  Recommended for transport and rail applications

Complies to international fire standards including EN45545-2 - Results R1, R7, R8, R10 HL3.
- Achieves highest fire rating results in latest rail standards
- Premium lightweight formulation. High performance damping with excellent system loss factor
- Offers chip and corrosion resistance, no cracking properties and high build rate

"Pyrotek SP150 Soundpaint® shows significant improvements to the transmission loss, vibration acceptance, and damping compared to the untreated steel and aluminium bulkheads. Comparisons to a previously tested spray-on damping treatment show that Soundpaint® performs significantly better in transmission loss, vibration acceptance, and damping."

Noise Control Engineering Inc. TM 12-071
Address resonant vibration in structures, facades, casings, chutes and anywhere high performance damping is required.

TYPICAL AREAS OF USE

BUILDING/INDUSTRIAL -
- Commercial, and multi-storey residential
- Government infrastructure projects, schools, educational and hospitals
- Industrial factories and equipment
- Mills and processing equipment
- Metal roofing - interior rain noise
- Metal structures - frames, facades, stairs
- HVAC - ducts, fan housing ventilation units
- Generator sets - metal panels
- Industrial - cabinets, covers, chutes
- Machinery - sheet metal, guards

MARINE -
- Pleasure craft, luxury
- Super yachts, mega yachts
- Military and amphibious warfare
- Work boats, tugs and trailers
- Commercial, coast guard, rescue vessels
- Offshore oil and gas platforms
- Hulls - reduces wave slap noise and resonance
- Decks, under screed interior floor
- Wall partitions, interior lining
- Bulkhead and deckhead
- Bow thruster, transom, propeller tunnels
- Engine rooms, enclosures
- Superstructure

TRANSPORT & RAIL -
- Carriages - trams, high speed, locomotive, monorail, urban trains
- Military, personnel carriers, combat, utility and transport vehicles
- Mining vehicles and equipment
- Specialist vehicles - armoured vehicles
- Passenger rail carriages - interior linings, floor, wall and ceiling
- Diesel and electric motor carriages
- Bus and truck - floor pans, engine bay, under bonnet, firewall, wheel arches
- Underbody, and interior body applications

Highest certification in fire standards

Decicoat™ T35 can be used as an independent solution, or to complement other insulation materials. This adds protection from condensation and corrosion while maintaining the overall thermal performance.
**DECICOAT™ T35**

Decicoat T35 is a water-based spray-on thermal insulation coating specially formulated with anti-condensation and corrosion protection properties. It also complies to international fire codes for building, rail and marine applications.

**Features**
- Thermal insulation, excellent anti-condensation and corrosion protection
- Lightweight, non-sag formulation with excellent adhesion to various metal substrates
- Complies to international standards for low spread of flame, smoke and toxicity
- Water-based compound – no volatile solvents or thinners required for cleaning (low odour environment)
- No primer required - easy, fast and seamless application
- Sprayable - air gun or airless spray system
- Long-lasting, cures to a hard chip,
- UV and moisture-resistant finish
- Can be used in conjunction with other insulation materials

**Application**
- Applications exposed to high humidity and temperature fluctuations such as: LNG or cryogenic pipes, building interiors or walls
- Underside of metal deck roofing and metal wall cladding
- Applied in conjunction with traditional fibrous or foam insulation to improve overall thermal insulation systems

**Why Decicoat T35?**

Condensation is associated with relative humidity, air pressure and occurs when temperature differentials between two areas pass over the ‘dew point’ threshold. **Decicoat T35** regulates surface temperatures of the component by inhibiting thermal transfer to effectively control the onset of condensation when applied with the appropriate coating thickness.
Technical Datasheet
Decicoat T35 is a water-based spray-on thermal insulation coating specially formulated with anti-condensation and corrosion protection properties. It has been developed to meet market requirements in the rail, off-shore, marine, chemical, petroleum, automotive and construction industries.

Unlike traditional insulation materials like glass wool or mineral fibre, Decicoat T35 provides a seamless and sprayable application with 100% coverage. This means Decicoat T35 successfully prevents thermal bridging.

With excellent adhesion to most metals, Decicoat T35 bonds flush with substrates even around uneven surfaces. Depending on the application requirement, it can be used as an independent solution, or to complement other insulation materials, when added protection from condensation and corrosion are required for overall thermal performance.

Condensation is associated with relative humidity, air pressure and occurs when temperature differentials between two areas pass over the ‘dew point’ threshold. With the right coating thickness, Decicoat T35 regulates surface temperatures of the component by inhibiting thermal transfer to effectively control the onset of condensation.

Near odourless, it complies with international fire codes for rail and marine applications, exhibiting a low spread of flame, low heat release, low toxicity and low smoke release during combustion.

**APPLICATIONS**

- Marine vessels: interiors of superstructures and hulls in workboats, luxury yachts and super-liners
- Rail applications: carriage ceiling and walls
- Industrial: on the underside of metal deck roofing, metal wall cladding or shipping containers
- Applications exposed to high humidity and temperature fluctuations
- Oil & gas/offshore: interior structures of habitable areas and LNG pipelines
- Automotive: heavy vehicles, buses, trailers, tractors
- Applied in conjunction with traditional fibrous or foam insulation to improve overall thermal insulation systems
- Domestic: pipes, walls, interiors

**FEATURES**

- Thermal insulation, excellent anti-condensation and corrosion protection
- Eliminate thermal bridging
- Complies to international standards - low spread of flame, smoke and toxicity
- Manufactured under ISO 9001 Quality Systems
- Use in conjunction with other insulation materials
- Decrease interior sound levels by damping panel resonance
- Lightweight, non-sag formulation with excellent adhesion to various metal substrates
- Long-lasting, cures to a hard chip, UV and moisture-resistant finish
- Water-based compound – no volatile solvents or thinners required for cleaning - low odour environment
- No primer required - easy, fast and seamless application
- Sprayable - air gun or airless spray system

Installation Guide
DECICOAT™ T35

This installation guide provides recommendations to maximise the service life in various applications. Decicoat™ T35 is a water-based thermal insulation compound that is simple to apply using a range of spray systems.

WORKING HEALTH AND SAFETY

- Ventilation is recommended for enclosed areas
- Personal Protection Equipment (PPE) including eye protection, gloves, respirator and safety clothing is recommended
- Equipment is easily cleaned with water

SURFACE PREPARATION

The product is specifically formulated to provide strong adhesion to difficult substrates such as uncoated aluminium, however, adequate surface preparation is essential for the best results.

- Ensure surfaces are free from dust, dirt, oil, grease, rust, mould, release agent, etc.
- It is recommended to abrade highly polished surfaces by wire brushing, sandblasting or using abrasive paper
- Ensure substrates are completely dry before applying Decicoat™ T35
- Decicoat™ T35 can be applied to a range of metallic substrates

MIXING

- Decicoat™ T35 should be thoroughly mixed before application using a ribbon or paddle mixer
- Mix until it is at a smooth and creamy consistency
- The pail can be placed upside down for 24 hours before use/opening to make mixing easier

RECOMMENDED APPLICATION METHODS

Spray systems:
- Air assisted
- Airless spray systems
  Suggested systems:
  - Pneumatic piston pump with XTR-7 airless spray gun
  - GNG/T3005 texture gun with bottom entry pressure pot

Trowel
- Can easily be applied by trowel

Ventilation can be used to assist in drying of the coating. Air movement should be both in/out during the drying process.

applications

- Marine vessels: interiors of superstructures and hulls in workboats, luxury yachts and super-liners
- Offshore platforms: interior structures of habitable areas
- Industrial: for underside of metal deck roofing and metal wall cladding
- Automotive: heavy vehicles, buses, trailers, tractors
- Rail applications: cars, interiors
- Domestic: pipes, walls, interiors
- Applied in conjunction with traditional fibrous or foam insulation to improve overall thermal insulation systems
- Applications exposed to high humidity and temperature fluctuations

Please refer to our website pyrotekn.com for the latest information
APPLICATION

Application rate and coverage:
• The minimum dry film thickness (DFT) should be 0.5 mm (0.02 in)
• A DFT of 2 mm (0.08 in) is recommended when applied to a system
• Additional thickness can be applied to achieve desired results
• Each coating should be 0.5 mm (0.02 in) to 1 mm (0.04 in) thick when applied
• The product must be dry before applying any additional coatings
• Allow at least 1 hour for 0.5 mm (0.02 in) coating to dry
• 1 mm (0.04 in) coating is touch dry after 1 hour
• It is dry enough for another coating after 1.5 hours
• 2 mm (0.08 in) coating can take up to 6 hours to dry at 35 °C (95 °F) with a relative humidity of 50%
• For best results, allow the compound to dry naturally
• Forced drying may result in cracking
• Decicoat™ T35 requires at least 1 day to fully cure
• In humid environments, the product can take longer to cure
• The application rate and curing time will vary in environments greater than 70% humidity
• Thicker applications as a single coat are possible but will require a longer drying time
• Apply the product above ambient temperatures of 10 °C (50 °F)
• The substrate can be ‘warmed’ to aid the drying process in cold conditions

Thickness check:
• A wet film gauge can be used to ensure the correct thickness achieved

Packaging and storage:
• Available in 19 L (5 gal) pail and 200 L (53 gal) drum
• Shelf life: 24 months from date of manufacture under recommended storage conditions
• Do not allow the product to freeze
• Stored and transported between 10 °C to 45 °C (50 °F to 115 °F)
• The product can be reused if sealed firmly and stored correctly after use

Please contact Pyrotek® for further information or detailed advice on your specific application.
DECICOAT T35

thermal insulation, anti-condensation and corrosion protection

SOUNDPROOFING SOLUTIONS FOR ALL INDUSTRIES
pyroteknxc.com
SEAMLESS INSTALLATION - CONTROLS THERMAL BRIDGING

Thermal bridges are pathways for heat transfer, typically caused when insulation is not continuous. Being sprayable, Decicoat T35 bonds flush around uneven surfaces, tight areas and provides 100% coverage even around mechanical assemblies. This reduces the occurrence and impact of thermal bridging where even high performance foam insulation systems with radiant barrier faces fail.

LIGHTWEIGHT AND SPRAYABLE

It’s a lightweight acrylic system, with excellent adhesion and non-sag formulation. It can be easily and quickly sprayed like paint with a range of spray systems.

THERMAL PROPERTIES

Decicoat T35 provides the benefits of both good thermal resistance (R value) and acts as a good radiant barrier (low emissivity). It controls both, rapid heat dissipation and heat absorption and exhibits increased performance with additional coatings thereby offering weight and space efficiency.

APPLICATIONS

- Marine vessels - interiors of structures and hulls in workboats, luxury yachts and super-liners etc
- Off-shore platforms - interior structures of habitable areas
- Industrial: the underside of metal deck roofing and metal wall cladding
- Automotive: heavy vehicles, buses, trailers, tractors.
- Rail cars: applied in conjunction with traditional fibrous or foam insulation to improve overall thermal insulation systems
- Domestic: pipes, walls, interiors
- Applications exposed to high humidity and temperature fluctuations

FIRE CERTIFICATION

Decicoat T35 achieves a wheelmark and complies with stringent international fire standards for building, industrial, rail and marine applications. It is low VOC and near odourless.
PREVENTS CONDENSATION

When thermal conduction takes place through a substrate, condensation occurs on the surface, when its temperature reaches the ‘dew-point’ threshold, i.e. the point of onset of condensation. Decicoat T35 has proven low thermal conductivity and permeability properties. When used on substrates exposed to high humidity or temperature variations, it inhibits thermal transfer and effectively regulates the temperature of the substrate surface to remain above the dew-point threshold, thereby preventing the onset of condensation.

PREVENTING CORROSION

Corrosion is a chemical and physical change that occurs in a material due to its interaction with its environment. Decicoat T35 provides a protective coating to metallic substrates, aiding in the prevention of condensation. Condensation can typically act as an electrolyte as part of galvanic corrosion. It will also cause dissolution of chloride and sulfide ion contaminants that exacerbate the corrosion process.

Decicoat T35 is formulated for ease of installation by spray application, directly onto ferrous and nonferrous surfaces.

INHIBITS CORROSION UNDER INSULATION (CUI)

Chemical contaminants typically found in materials such as glass wool or mineral fibre react with moisture trapped in the air gaps, under poorly installed insulation, to form an acidic reaction which corrodes the metallic substrate.

Corrosion under Insulation (CUI), is difficult to detect and treat in situ, and leads to degradation and reduced performance of the system over a period of time.

In eliminating the occurrence of thermal bridging, Decicoat T35 inhibits CUI and enhances the durability of such insulation systems. It maintains the overall thermal performance of the system besides offering a weight, space, cost and time efficient solution.
Pyrotek endorse forest sustainability and the preservation of natural environment. We procure the highest quality materials from suppliers who hold FSC (Forest Stewardship Council) Certification and PEFC (Programme for the Endorsement of Forestry Certification) amongst other certification programmes.

- Custom fabricated removable thermal jacketing
- Acoustic louvre design and fabrication
- Vibration damping products
- On-site noise level testing
- Expansion joints

power generation

- Custom-designed cab insulation to meet the current noise regulations
- Thermal exhaust and turbo covers for personal protection
- Heat shielding products
- Noise and vibration monitoring and control
- High temperature seals and exhaust tapes

transport
Pyrotek was established in 1956. Our high temperature and acoustic products are developed through innovation and understanding of market needs. Our advanced material expertise and product engineering knowledge provides product solutions for the most demanding applications. Our goal is to provide high quality products and services to all areas of industry and to be at the forefront of technology in product application and design. We are able to offer products to reduce noise and fire risk in the oil and gas, marine, offshore, power generation, mining, thermal, fire and welding protection, petrochemical, transport and aerospace domains.

• Turbocharger covers
• Valve covers
• Insulation blankets
• Exhaust lagging
• Acoustic insulation
• Accommodation fire panels
• Fire protection to meet B, A, H and J class

• Flexible hoses
• Dust and flange covers
• Anti-static materials
• Fabricated insulation covers
• Acoustic treatments
• Seals and flanges
Pyrotek’s more than 50 years’ experience supports our premium thermal and noise insulation products and services. These products reduce noise and heat to comfortable safe levels in a range of applications.

Our world-class team of engineers and scientists bring a wealth of knowledge and experience to successfully control and reduce heat and noise in demanding environments. They refine existing products and create new materials as required to meet the unique needs of our customers.

Working with a diverse range of impregnated fabrics for high temperature applications allows us to select textiles that are engineered for strength, dependability and long service life in the toughest of environments. Pyrotek offers services such as:

- CNC cutting technology including laser, waterjet and multi-axis tables
- digitally created patterns using the latest software for repeatability
- fully equipped laboratory to simulate international fire and mechanical testing
- onsite installation service including project management, underground, cryogenic and hot work installation
Pyrotek helps control noise. Our world-class team of engineers and scientists bring a wealth of knowledge and experience to design and develop products that successfully control noise in demanding environments.

**Vibration Damping**
Vibration noise can be minimised by applying vibration damping materials that dissipate vibration energy in the structure and convert it to heat. Our products include constrained layer damping, extensional damping and vibration isolation.

**Noise Barriers**
Noise barriers are a flexible, mass-loaded vinyl, offering superior acoustic transmission loss. Our range includes noise-reducing floor mats, mass barriers, low spread of flame, low smoke & fire retardant noise barriers.

**Sound Absorbers**
Sound absorbers are applied to reduce noise energy. We provide a range of materials such as fibreglass, foam and polyester with a variety of surface coverings to suit each application.

**Barrier Absorber Composites**
Pyrotek has created a unique acoustic solution – combining acoustic foam and a noise barrier, developed with the aim of simplifying the acoustic treatment of enclosures, engine bays and plant rooms.

**Barrier Absorber Composites**
Pyrotek has created a unique acoustic solution – combining acoustic foam and a noise barrier, developed with the aim of simplifying the acoustic treatment of enclosures, engine bays and plant rooms.
All exhaust gas duct work requires expansion joints or vibration eliminators to absorb any movement in the duct work.

We manufacture a range of fabric and metallic expansion joints. The correct materials are selected depending on temperature and the type of corrosive gases present. We supply fabric expansion joints made from high temperature fabrics and are also able to incorporate high density noise barrier materials to provide a sound barrier in joints on or near fans.

We offer a complete service including design, manufacture and supply of the fabric and metallic expansion and associated steelwork.

- Fabric expansion joints custom designed and fabricated
- Custom-made metallic bellows for high temperature, pressure and chemical resistance.
- High noise reduction acoustic expansion joints
- Variety of specialty fabrics to withstand highly corrosive, acidic and alkaline conditions
- Complete expansion joint assemblies ready for installation
- On-site supervision of installation
Pyrotek speciality products custom makes and designs covers that utilise our range of fabrics, felts and blankets to suit a variety of conditions from cryogenic to high temperature metal smelting. There is an increasing demand for removable insulation covers for all types of high temperature equipment. Our covers provide excellent personal protection from heat and are easy to remove and replace when performing maintenance.

Our full service means you can leave the material selection, measuring, design, predicted performance calculations and installation to the specialists - us.

- Industrial machinery and turbine covers
- Custom-made valve and flange covers for the off-shore industry
- Exhaust and manifold covers for the mining and marine industry
- Aerospace-approved products
- Prefabricated jackets for pipes, holding vessels and tanks
- High temperature acoustic curtains and covers
- Fire-rated curtains

Expansion Joints - Metallic and Fabric
Plain fibreglass
Pyrotek manufactures and coats fibreglass fabric offering an extensive range of fibreglass fabrics in an extensive range of weights, finishes, colours and textures. Weights are available from 50g/m² up to 3000g/m². All our loom state fabrics are available with a weave set finish to reduce fraying.

Wire-reinforced fibreglass
A unique method of introducing stainless steel continuous fibres gives us the ability to design high temperature fabrics where additional strength and integrity is required. Our wire-reinforced fabrics are also available with graphite, vermiculite or silicon coatings.

Vermiculite-coated fibreglass
Our vermiculite-coated fabrics exhibit excellent temperature and abrasion resistance. The vermiculite treatment improves the fabrics temperature resistance to withstand temperatures up to 800ºC. A vermiculite coating can also be applied onto silica glass or ceramic fabric. Typically these fabrics are supplied in weights of 600 and 1000g/m².

Graphite-impregnated fibreglass
Our graphite-treated fabrics are impregnated using a dip coating method to provide a uniform coverage. We offer several graphite treatments for an assortment of applications. Graphite treatment improves the base fabric’s heat resistances and also offers excellent abrasion resistance.

Silicon-coated fibreglass
Silicon-coated fabrics are available in various weights from 180 to 1200g/m². Our optimised formula offers excellent heat resistances allowing the fabric to remain flexible and durable during prolonged use at high temperatures. Our silicon fabrics are available with a single-sided or double-sided coating and in a range of standard colours. Silicon also has excellent UV durability and is resistant to water, oils, grease, fuels and many chemicals.
Foil and mylar-faced fibreglass
Our fibreglass fabrics can be supplied with a layer of pure aluminium foil, stainless steel foil or mylar-faced films. These facings offer a highly reflective surface and also act as a vapour and liquid barrier. The films are bonded using the latest technology and are resistant to higher temperatures than traditional laminations.

Neoprene-coated fibreglass
Neoprene offers excellent fire resistance and also provides high resistance to chemical and liquid attack. Neoprene-coated fabrics provide excellent protection against hot metal grindings and weld splatter. A full range of weights and sizes is available.

Silica glass
Silica glass fabrics have been developed for use in applications requiring higher temperature performance than traditional fibreglass. Fibreglass fabrics are typically rated to 550°C, silica glass fabrics can withstand temperatures of up to 1000°C. Silica fabrics also have excellent chemical resistance and electrical insulation properties.

Teflon®-coated fibreglass
Teflon® (PTFE) is a high temperature non-reactive polymer coating. Our Teflon coated fabrics are resistant to most reactive and corrosive chemicals and also have high abrasion resistance. These fabrics are often used as a weather or chemical resistant barrier. A comprehensive range of weights and sizes is available.

Ceramic-coated woven fabric
Offering the highest temperature resistance in woven fabrics, our ceramic fabrics have excellent chemical, abrasion and thermal resistance. These fabrics are able to withstand temperatures up to 1600°C without melting. They can easily be cut, sewn and fabricated into various shapes, and are available with stainless steel or Inconel® wire reinforcing.
Pyrotek supplies a wide range of thermal insulation products to meet different requirements.

- Polyester from 20 to 80 kg/m³ for thermal and acoustic applications from -10°C to 110°C
- Traditional glasswool, 16 to 130 kg/m³ for temperature from -10°C to 530°C
- Quilted fibreglass blanket for thermal and acoustic applications for applications needing better mechanical strength
- Cryogenic fibreglass for temperatures from -150°C to 530°C
- Needlemat, 130 kg/m³ fibreglass felt with high mechanical strength and rated to 650°C
- Rockwool from 45 to 130 kg/m³. Rockwool is suitable for temperatures up to 830°C
- ULTIMATE, a marine certified thermal and acoustic fire insulation achieving A0 to A60 requirements
- Ceramic fibre for service temperatures 1200°C to 1600°C
- BioSoluble fibre (or low bio-persistence fibres for temperatures between 1000°C to 1200°C)
Accessories

Pyrotek offers a range of consumable items to complement our products

- Weld pins and clips in a range of styles and sizes, both Arc and CD pins are available in plain or bimetallic versions
- Industrial insulation pins and clips are available with either a perforated based plate or pressure sensitive adhesive
- Fire proof mastic compounds rated to 1000°C for sealing penetrations in high temperature applications
- High temperature fibreglass or ceramic tapes and ropes for door seals and lagging
- High temperature silicone coated fibreglass tubing
- Braided ropes and tadpole seals available in a comprehensive range of sizes
- Insulcoat - anti condensation coating
- Stainless steel knitted mesh
- Lacing hooks, eyelets and sewing treads
Pyrotek endorse forest sustainability and the preservation of natural environment. We procure the highest quality materials from suppliers who hold FSC (Forest Stewardship Council) Certification and PEFC (Programme for the Endorsement of Forestry Certification) amongst other certification programmes.

Caveats: Specifications are subject to change without notice. The data in this document are typical of average values based on tests by independent laboratories or by the manufacturer and are indicative only. Materials must be tested under intended service conditions to determine their suitability for purpose. The conclusions drawn from acoustic test results are as interpreted by qualified independent testing authorities. Nothing here releases the purchaser/user from responsibility to determine the suitability of the product for their project needs. Always seek the opinion of your acoustic or mechanical engineer on data presented by the manufacturer. Due to the wide variety of individual projects, Pyrotek NC is not responsible for differing outcomes from using their products.

Pyrotek disclaims any liability for damages or consequential loss as a result of reliance solely on the information presented. No warranty is made that the use of this information or of the products, processes or equipment to which this Information Page refers will not infringe any third party's patents or rights.

DISCLAIMER: This document is covered by Pyrotek standard Disclaimer, Warranty and © Copyright clauses. See pyroteknc.com/disclaimer.
FABRICATED COVERS

Pyrotek® designs and manufacture custom covers that utilise our range of fabrics, felts and blankets to suit a variety of conditions from cryogenic to high temperature applications. There is an increasing demand for removable insulation covers for all types of high-temperature equipment. Our covers provide excellent personal protection from heat and are easy to remove and replace when performing maintenance.

TAPE ALR

Tape ALR is a high-performance insulation reinforced aluminium foil tape, designed for use as a joining and covering tape for Pyrotek’s aluminium foil faced products like Soundlag, Sorberfoam, Sorberpoly and Sorberbarrier.

The reinforcing mesh in Tape ALR provides excellent mechanical stability during application and once in place prevents further movement. The nature of the tape is such that it provides a rare combination of high strength, flexibility and conformability.

FIXSEAL MSP15

Fixseal MSP15 is a high quality single component joint sealant with high adhesive strength. It is based on MS Polymer®, which is chemically neutral and fully elastic with excellent primerless bonding.

For use in low movement joints, adhesion and waterproofing in the construction, automotive, marine and aerospace industries where a strong bond and/or UV resistant flexible seal is required.

For our complete product range, visit pyrotekn-c.com/industries/oil-and-gas/
Technical Datasheet
Tape ALR is a high performance insulation reinforced aluminium foil tape, designed for use as a joining and covering tape for Pyrotek Noise Control’s aluminium foil faced products like Soundlag®, Sorberfoam™, Sorberpoly™ and Sorberbarrier®.

The reinforcing mesh in Tape ALR provides good mechanical stability during application and once in place prevents further movement. The nature of the tape is such that it provides a rare combination of high strength, flexibility and conformability.

The pressure sensitive adhesive backing on Tape ALR which is rubber or acrylic based, is formulated to give high initial tack and high holding power.

The backing is protected by a silicone coated, removable release paper which provides easy release properties and aids ease of application.

APPLICATION PRECAUTIONS

- Surfaces must be smooth, clean and free from grease, loose or flaking paint, dirt, and contaminants.
- Surfaces can be cleaned with a degreasing solvent cleaner before applying the product.
- Pressure should be used when applying to any surface.
- Adhesion tests are recommended for powder coated surfaces.
- Ageing trials should be performed on plasticised PVC.
- These tapes are not to be used as mechanical joining devices.
- It is essential, that the user evaluate product suitability for a particular application.

features

- High performance synthetic pressure sensitive adhesive backing.
- Polyethylene fibre mesh/film composite reinforced aluminium foil.
- High initial tack and grab.
- Broad operating temperature range.
- High performance in heat, humidity and environmental conditions.
- Resistant to dust, oils and solvents.
- Reflects and insulates against heat.
- Easily cut, shaped, fabricated allowing easy installation.
- Puncture and tear resistant.
- Tougher than similar products.
- Long service life.
- Dimensionally stable.

applications

- Pipe lagging.
- Machinery and equipment enclosures.
- Compressor and generator set enclosures.
- Car, boat, truck and bus engine compartments, firewalls and bonnets.
- Air-conditioning units and systems.
- Hydraulic pump enclosures.

**HEALTH AND SAFETY RECOMMENDATION**

Apply the usual industrial hygiene. Wear gloves, safety glasses.

**CERTIFICATION**

SOLAS Certified
MED 0327QA, U.S. Coast Guard Approved No. 164.106/1121/WCL.

---

**applications**

- Sealing and bonding of areas with high traffic, floor joints and low movement wall joints.
- Suitable for bonding and sealing but not limited to steel, aluminium, stainless, PVC, fiberglass, concrete, composite, glass, timber, mirrors, polystyrene, rubber, PU foam, etc.
- Connection joints in sheet metal fabrication.
- Sealing and bonding of coachwork, caravans, boats, commercial ferries and ships, buses, aircraft, domestic and commercial construction.

**features**

- High bond strength on a wide variety of substrates
- High performance mechanical properties
- Flexible elastic rubber; movement accommodation up to 20%
- Assessed under criteria of NOHSC Australia and considered as non-toxic, Certificate No.2146.
- US Coast Guard Approved: Approval No. 164.106/1121/WCL.
- Solas Certified: MED 0327QA
- No bubble formation within the sealant.
- Primerless adhesion (except where capillary water pressure can occur).
- Easy to tool and finish
- Excellent extrudability and UV resistance
- Ecological advantages - free from isocyanates, solvents, halogens and acids
- Minimal health and safety considerations
- Can be wet on wet painted with all water-based paints and many other systems*
- No staining of porous materials such as natural stone, granite, marble, etc.

Note: The contents contained in this documentation are the result of our experiments and our experience and have been submitted in good faith. Because of the diversity of the materials and substrates and the real number of possible applications which are beyond our control we cannot accept any responsibility for the results obtained. In every case it is recommended to carry out preliminary experiments and compatibility tests.

### APPLICATION EQUIPMENT

**Method:** Manual or pneumatic caulking gun

**Application temperature:** +5°C to +35°C

**Clean up:** Methylated Spirits or industrial alcohol cleaner immediately after application and before curing

**Tooling:** mild diluted soapy solution (e.g. pH neutral dishwashing liquid diluted in fresh clean water), before skin formation

**Repair:** Fixseal FIX15 - MSP15

**Surfaces**

Typical Surface: Abraded with red abrasive pad or suitable sand paper, clean, dry, free of dust and grease, wipe surface clean with industrial alcohol.

Glass: clean, dry, free of dust and grease, wipe surface clean with industrial alcohol.

As the specific properties of substrates will differ from manufacturer to manufacturer we strongly recommend compatibility tests.

**Priming**

a) For porous substrates we recommend Primer PR10 be applied.

b) PE or PP Plastics we recommend Primer PR20 be applied for good adhesion.

**Remarks:** Fixseal MSP15 may be painted over with water based paints. However due to the large number of paints such as and not limited to 1 and 2 pack PU paints, acrylcs, 2 pack varnishes that are available, we strongly recommend compatibility tests before application. The drying time of some alkali paint systems may increase and some enamel and oil-based paints will not cure properly.

Safety Data Sheet
1. IDENTIFICATION OF THE SUBSTANCE/PREPARATION AND OF THE COMPANY/UNDERTAKING

Commodity code
17004-WAVEBAR

Product Name
Wavebar

Synonyms
Wavebar Original, Quadzero, Quadzero MVT, Wavebar Outdoor, Sound Baffle, Sound Damping Pad

Product description
This MSDS supports the product as a mass barrier or as a component of an acoustic composite material that may be supplied with a number of different, non-hazardous facing materials.

Product use
Acoustic application/Noise reduction.

2. Hazards Identification

Classification according to EU Regulation EC 1272/2008 (GHS)

Classification according to EU Directives 67/548/EEC or 1999/45/EC [Australian NOHSC: 1008 (2004)]

Australian Hazard text
Not classified as hazardous according to criteria of NOHSC:1008 (SWA/ASCC).

R -phrase(s)
No information available

Poison Schedule Number
No information available

Further information
During manufacture the Barium Sulfate, plasticiser and Polyvinyl Chloride are fused and as such become fully encapsulated within the product.
3. Composition/information on Ingredients

All other ingredients determined not to be hazardous according to NOHSC / GHS criteria

Storage
Keep in a dry place.

Materials to avoid
Strong oxidizing agents.

8. Exposure Controls/Personal Protection

Exposure Guidelines

Biological standards

Occupational exposure controls

Engineering Controls
Ensure adequate ventilation, especially in confined areas when mist is present.

Environmental exposure controls
No information available.

Personal Protective Equipment

Considerations to aid the user in PPE assessments in line with expected use follow below. However in certain circumstances the user must determine if additional protective equipment is required. If exposure limits are exceeded or irritation is experienced, locally approved respiratory protection should be worn. Positive-pressure supplied air respirators may be required if high airborne contaminant concentrations as a result of the use of the product. Proper skin and eye protection should also be determined by the user and provided in accordance with current local regulations.

Eye Protection
Avoid contact with eyes

Respiratory protection
No special protective equipment required.

Skin Protection
Long sleeved clothing.

Hand Protection
Cut resistant or Leather gloves

General industrial hygiene practice
Handle in accordance with good industrial hygiene and safety practice.

10. Stability and Reactivity

Stability
Stable under normal conditions.

Conditions to Avoid
Prolonged exposure to high temperatures.

Materials to avoid
Strong oxidizing agents.

Hazardous Decomposition Products
Sulfur oxide. Carbon oxides. Thermal decomposition can lead to release of irritating gases and vapors.

Possibility of Hazardous Reactions
None known
11. Toxicological Information

Local effects
No information available.

Target organ effects
No information available.

Acute Toxicity

Potential Health Effects

Inhalation
Not a normal route of exposure.

Eye Contact
Contact with eyes may cause irritation.

Skin Contact
Long-term or repeated skin contact in combination with bad hygiene may cause skin irritation.

Ingestion
Not a normal route of exposure. Ingestion may cause gastrointestinal irritation.

Aggravated Medical Conditions
None known.

Specific effects

Carcinogenic effects
No information available.

Mutagenic effects
No information available.

Reproductive Toxicity
No information available.

12. Ecological Information

Ecotoxicity effects
Information follows.

Persistence and degradability
None known

Mobility in Environmental Media
None known

Bioaccumulation
None known

13. Disposal Considerations

Waste disposal methods
Dispose of in accordance with federal, state and local regulations.

Contaminated packaging
Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport Information

Not regulated for transport.

15. Regulatory Information

International Inventories

Carcinogenic substances
Not Listed
16. Other Information

Revision Date: 2018-07-09

Reason for Revision: Routine review with applicable updates to better reflect product.

Product code 17001-SP150 AF
Product name Decidamp SP80
Synonyms Soundpaint SP150
Product use Sound absorbing material.

Manufacturer or supplier's details
Pyrotek Pty. Ltd.
147-149 Magowar Road
Girraween
NSW 2145
Australia

Pyrotek (61) (0)2 9631 1333
Fax: (61) (0)2 9631-0233
Email: SDS@pyrotek-inc.comREACH email: REACH@pyrotek-inc.com

Emergency telephone number CHEMTREC 1800 752 022 (24 hrs), Pyrotek Australia 1800 679 422

2. HAZARDS IDENTIFICATION

Classification according to EU Regulation EC 1272/2008 (GHS)
Not a hazardous substance or mixture according to the Globally Harmonised System (GHS)

Classification according to EU Directives 67/548/EEC or 1999/45/EC [Australian NOHSC: 1008 (2004)]

Australian Hazard text Not classified as hazardous according to criteria of NOHSC:1008 (SWA/ASCC).
Classification Symbol(s) In accordance with Directive EC 1272/2008 and its amendments, this substance does not need to be classified nor labelled
Poison Schedule Number No information available
4. FIRST AID MEASURES

General advice
No information available.

Inhalation
In the unlikely event of excessive inhalation of dust remove the individual to the fresh air. If aspirated, get immediate medical attention.

Skin contact
In the unlikely event of skin irritation, wash affected part with mild soap and running water.

Eye contact
Immediately flush with plenty of water. After initial flushing, remove any contact lenses and continue flushing for at least 15 minutes.

Ingestion
Not a normal route of exposure. DO NOT induce vomiting. Drink plenty of water. Consult a physician.

Aggravated Medical Conditions
No information available.

Notes to physician
No information available.

For advice, contact Poisons Information Centre
In Australia, call Tel: 13 1126
In New Zealand, call Tel: 034747000

5. FIRE-FIGHTING MEASURES

Flammable properties
The product is not flammable.

Suitable extinguishing media
Use extinguishing measures that are appropriate to local circumstances and the surrounding fire.

Unsuitable Extinguishing Media
None known.

Special exposure hazards in a fire
No information available.

Specific hazards arising from the chemical
None known.

Protective equipment and precautions for firefighters
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

Australian Hazchem Code
None known

6. ACCIDENTAL RELEASE MEASURES

Personal precautions
Appropriate protective equipment as detailed in section 8.

Environmental precautions
Pick up and transfer to properly labelled containers. Prevent product from entering drains. Flush into sewer with plenty of water.

Methods for cleaning up
Shovel or sweep up. Soak up with inert absorbent material (e.g. sand, silica gel, acid binder, universal binder, sawdust).

7. HANDLING AND STORAGE
Handling  
Handle in accordance with good industrial hygiene and safety practice.

Storage  
Keep in a dry, cool and well-ventilated place.

Materials to avoid  
No information available.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines  
No exposure limit allocated

Biological standards  
No biological limit allocated

Occupational exposure controls

Engineering Controls  
Ensure adequate ventilation, especially in confined areas

Environmental exposure controls  
No information available.

Personal Protective Equipment

Considerations to aid the user in PPE assessments in line with expected use follow below. However in certain circumstances the user must determine if additional protective equipment is required. If exposure limits are exceeded or irritation is experienced, locally approved respiratory protection should be worn. Positive-pressure supplied air respirators may be required if high airborne contaminant concentrations as a result of the use of the product. Proper skin and eye protection should also be determined by the user and provided in accordance with current local regulations.

Eye protection  
Safety glasses with side-shields [AS/NZS 1337]

Respiratory protection  
In order to avoid inhalation of spray-mist and sanding dust, all spraying and sanding must be done wearing adequate respirator.

Skin Protection  
Work uniform or laboratory coat.

Hand protection  
Rubber or plastic gloves

General industrial hygiene practice  
Handle in accordance with good industrial hygiene and safety practice.

10. STABILITY AND REACTIVITY

Stability  
Stable under normal conditions.

Conditions to avoid  
Extremes of temperature and direct sunlight.

Materials to avoid  
No information available.

Hazardous decomposition products  
carbon dioxide (CO2). Carbon monoxide. Nitrogen oxides (NOx).

Possibility of Hazardous Reactions  
None known
11. TOXICOLOGICAL INFORMATION

Local effects
No information available.

Target Organ Effects
No information available.

Acute toxicity
No information available.

Potential health effects
- Inhalation: At spraying, mist may arise. Avoid breathing vapors or mists. May cause irritation of respiratory tract.
- Eye contact: Contact with eyes may cause irritation.
- Skin contact: May cause skin irritation and/or dermatitis.
- Ingestion: Not a normal route of exposure. Ingestion may cause gastrointestinal irritation. May be harmful if swallowed.

Specific effects
- Carcinogenic effects: No information available.
- Mutagenic effects: No information available.
- Reproductive toxicity: No information available.

12. ECOLOGICAL INFORMATION

Ecotoxicity effects
Not expected to be an environmental hazard. Avoid release to the environment.

Persistence and degradability
None known

Mobility in Environmental Media
None known

Bioaccumulation
None known

13. DISPOSAL CONSIDERATIONS

Waste disposal methods
Dispose of in accordance with local regulations.

Contaminated packaging
Empty containers should be taken for local recycling, recovery or waste disposal.

14. TRANSPORT INFORMATION

Not regulated for transport.

15. REGULATORY INFORMATION

All known constituents of this product are listed in the Australian Inventory of Chemical Substances (AICS)

Carcinogenic substances
Not Listed
16. OTHER INFORMATION

Revision Date 2017-03-26

Reason for revision Product name(s) updated and routine review. Routine review with applicable updates to better reflect product.

Emergency telephone number | Chemtrec 1800 752 022 (24 hrs), Pyrotek Australia 1800 679 422

2. HAZARDS IDENTIFICATION

Classification according to EU Regulation EC 1272/2008 (GHS)
Not a hazardous substance or mixture according to the Globally Harmonised System (GHS)

Classification according to EU Directives 67/548/EEC or 1999/45/EC [Australian NOHSC: 1008 (2004)]
Australian Hazard text | Not classified as hazardous according to criteria of NOHSC:1008 (SWA/ASCC).
Poison Schedule Number | No information available
Further information

No hazards resulting from the material as supplied.
Steel products in their solid state present no inhalation, ingestion, or contact health hazard. Operations such as burning, welding, sawing, brazing, grinding, and machining, which result in elevating the temperature of the product to, or above its melting point, or result in the generation of airborne particulates, may present hazards.

3. COMPOSITION/INFORMATION ON INGREDIENTS

All other ingredients determined not to be hazardous according to NOHSC / GHS criteria.

4. FIRST AID MEASURES

General advice
No information available.

Inhalation
Not a normal route of exposure. Move to fresh air. Consult a physician if necessary.

Skin contact
In the unlikely event of skin irritation, wash affected part with mild soap and running water.

Eye contact
Not irritating to eyes in the form supplied.

Ingestion
Not a normal route of exposure.

Aggravated Medical Conditions
None known.

Notes to physician
No information available.

For advice, contact Poisons Information Centre
In Australia, call Tel: 13 1126
In New Zealand, call Tel: 034747000

5. FIRE-FIGHTING MEASURES

Flammable properties
The product is not flammable.

Suitable extinguishing media
Use extinguishing measures that are appropriate to local circumstances and the surrounding fire.

Unsuitable Extinguishing Media
None known.

Special exposure hazards in a fire
None Known.

Specific hazards arising from the chemical
None known.

Protective equipment and precautions for firefighters
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

Australian Hazchem Code
None known.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions
Use personal protective equipment.

Environmental precautions
No special environmental precautions required.

Methods for cleaning up
No special method required.
7. HANDLING AND STORAGE

Handling
Handle in accordance with good industrial hygiene and safety practice.

Storage
Keep in a dry, cool and well-ventilated place.

Materials to avoid
Acids. Alkalis.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines

Occupational exposure controls

Engineering Controls
If user operations generate dust, fume or mist, use ventilation to keep exposure to airborne contaminants below the exposure limit

Environmental exposure controls
No information available.

Personal Protective Equipment
Considerations to aid the user in PPE assessments in line with expected use follow below. However in certain circumstances the user must determine if additional protective equipment is required. If exposure limits are exceeded or irritation is experienced, locally approved respiratory protection should be worn. Positive-pressure supplied air respirators may be required if high airborne contaminant concentrations as a result of the use of the product. Proper skin and eye protection should also be determined by the user and provided in accordance with current local regulations.

Eye protection
Safety glasses

Respiratory protection
No special protective equipment required.

Skin Protection
Long sleeved clothing.

Hand protection
Cut resistant or Leather gloves

General industrial hygiene practice
Handle in accordance with good industrial hygiene and safety practice.

10. STABILITY AND REACTIVITY

Stability
Stable under normal conditions.

Conditions to avoid
None known.

Materials to avoid
Acids. Alkalis.

Hazardous decomposition products
carbon dioxide (CO2), Carbon monoxide. Thermal decomposition can lead to release of irritating gases and vapors.
11. TOXICOLOGICAL INFORMATION

Local effects
No information available.

Target Organ Effects
No information available.

Acute toxicity

Potential health effects
- Inhalation: Not a normal route of exposure.
- Eye contact: None known.
- Skin contact: Prolonged skin contact may cause skin irritation and/or dermatitis.
- Ingestion: Not a normal route of exposure.

Aggravated Medical Conditions
None known.

Specific effects
- Carcinogenic effects: No information available.
- Mutagenic effects: No information available.
- Reproductive toxicity: No information available.

12. ECOLOGICAL INFORMATION

Ecotoxicity effects
Information follows.

Persistence and degradability
Not readily biodegradable

Mobility in Environmental Media
None known

Bioaccumulation
Does not bioaccumulate

13. DISPOSAL CONSIDERATIONS

Waste disposal methods
Dispose of in accordance with local regulations.

Contaminated packaging
Empty containers should be taken for local recycling, recovery or waste disposal.

14. TRANSPORT INFORMATION

Not regulated for transport.

15. REGULATORY INFORMATION

International Inventories

Carcinogenic substances
None listed
EU Labeling

EC Label

16. OTHER INFORMATION

Revision Date 2016-09-13

2. Hazards Identification

Classification according to EU Regulation EC 1272/2008 (GHS)
Not a hazardous substance or mixture according to the Globally Harmonised System (GHS)

Classification according to EU Directives 67/548/EEC or 1999/45/EC [Australian NOHSC: 1008 (2004)]
Australian Hazard text Not classified as hazardous according to criteria of NOHSC:1008 (SWA/ASCC).
Poison Schedule Number None known
Further information Dust from dried material may cause skin, eye and respiratory track irritation.
### 4. First Aid Measures

**General advice**
Show this safety data sheet to the doctor in attendance.

**Inhalation**
Avoid breathing dust. Remove to fresh air. If symptoms persist, call a physician.

**Skin Contact**
Do not rub. Wash off with soap and water. Wash contaminated clothes before wearing them again.

**Eye Contact**
In case of eye contact, remove contact lens and rinse immediately with plenty of water, also under the eyelids, for at least 15 minutes. If eye irritation persists, consult a specialist.

**Ingestion**
Not a normal route of exposure. Do NOT induce vomiting. Drink 1 or 2 glasses of water. Seek medical advise. Rinse mouth.

**Aggravated Medical Conditions**
No information available.

**Notes to Physician**
Treat symptomatically.

For advice, contact Poisons Information Centre
In Australia, call Tel: 13 1126
In New Zealand, call Tel: 034747000

### 5. Fire-Fighting Measures

**Flammable properties**
Not flammable.

**Suitable Extinguishing Media**
Use extinguishing measures that are appropriate to local circumstances and the surrounding fire

**Unsuitable Extinguishing Media**
None known.

**Special exposure hazards in a fire**
Thermal decomposition can lead to release of irritating gases and vapors. Carbon oxides.

**Specific hazards arising from the chemical**
None known.

**Protective equipment and precautions for firefighters**
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

**Australian Hazchem Code**
None known

**Poison Schedule Number**
None known

### 6. Accidental Release Measures

**Personal precautions**
Appropriate protective equipment as detailed in section 8. Slippery, can cause falls if walked on.

**Environmental Precautions**
Avoid release to the environment. Do not flush into surface water or sanitary sewer system.

**Methods for cleaning up**
Contain the spill by using a mineral absorbent. Take up mechanically, placing in appropriate containers for disposal. Clean contaminated surface thoroughly.
7. Handling and Storage

Handling
Avoid dust formation. Provide exhaust ventilation or other engineering controls to keep the airborne concentrations of vapors below their respective occupational exposure limits.

Storage
Keep containers tightly closed in a cool, well-ventilated place.

Materials to avoid
Incompatible with strong acids and bases. Oxidizing agent.

8. Exposure Controls/Personal Protection

Exposure Guidelines

Occupational exposure controls

Engineering Controls
Ensure adequate ventilation, especially in confined areas when mist is present.

Environmental exposure controls
No information available.

Personal Protective Equipment
Considerations to aid the user in PPE assessments in line with expected use follow below. However in certain circumstances the user must determine if additional protective equipment is required.
If exposure limits are exceeded or irritation is experienced, locally approved respiratory protection should be worn.
Positive-pressure supplied air respirators may be required if high airborne contaminant concentrations as a result of the use of the product. Proper skin and eye protection should also be determined by the user and provided in accordance with current local regulations.

Eye Protection
Safety glasses

Respiratory protection
Avoid breathing dust. During spraying, wear suitable respiratory equipment: Respirator with combination filter for vapor / particulate.

Skin Protection
Work uniform or laboratory coat.

Hand Protection
Rubber gloves

General industrial hygiene practice
Avoid dust formation. Remove and wash contaminated clothing before re-use.

10. Stability and Reactivity

Stability
Stable under normal conditions.

Conditions to Avoid
Extremes of temperature and direct sunlight.
Materials to avoid
Incompatible with strong acids and bases. Oxidizing agent.

Hazardous Decomposition Products
Thermal decomposition can lead to release of irritating gases and vapors. Decomposition products: Carbon oxides, Aluminum Oxide, Silicon oxides.

Possibility of Hazardous Reactions
Hazardous polymerization does not occur

11. Toxicological Information

Local effects
No information available.

Target organ effects
No information available.

Acute Toxicity

Potential Health Effects

Inhalation
Inhalation of vapors in high concentration may cause irritation of respiratory system. Inhalation of dry silica dusts may result in silicosis.

Eye Contact
Contact with eyes may cause irritation.

Skin Contact
May cause skin irritation and/or dermatitis.

Ingestion
Not a normal route of exposure. Ingestion may cause gastrointestinal irritation.

Sensitisation
May cause sensitization of susceptible persons. May cause sensitization by inhalation and skin contact.

Aggravated Medical Conditions
No information available.

Specific effects

Carcinogenic effects
No information available.

Mutagenic effects
No information available.

Reproductive Toxicity
No information available.

12. Ecological Information

Ecotoxicity effects
Not expected to be an environmental hazard. The product should not be allowed to enter drains, water courses or the soil.

Persistence and degradability
None known

Mobility in Environmental Media
None known

Bioaccumulation
None known

13. Disposal Considerations

Waste disposal methods
Dispose of in accordance with federal, state and local regulations.

Contaminated packaging
Empty containers should be taken for local recycling, recovery or waste disposal.

14. Transport Information
17703 - INSULCOAT  
Decicoat T35

Not regulated for transport.

15. Regulatory Information

International Inventories

Carcinogenic substances  
Contains substances considered carcinogenic according to the following regulatory classifications

Poison Schedule Number  
None known

16. Other Information

Revision Date:  
2018-03-27

Reason for Revision  
Routine review with applicable updates to better reflect product.

5. FIRE-FIGHTING MEASURES

Flammable properties
The product is not flammable.

Suitable extinguishing media
Dry chemical, carbon dioxide (CO2), Water

Unsuitable Extinguishing Media
None known.

Special exposure hazards in a fire
No information available.

Specific hazards arising from the chemical
None known.

Protective equipment and precautions for firefighters
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

Australian Hazchem Code
None known

6. ACCIDENTAL RELEASE MEASURES

Personal precautions
Use personal protective equipment.

Environmental precautions
No special environmental precautions required.

Methods for cleaning up
Material is a Solid, pickup and replace in container.

7. HANDLING AND STORAGE

Handling
Handle in accordance with good industrial hygiene and safety practice. Take precautionary measures against static discharges.

Storage
Keep in a dry, cool and well-ventilated place.

Materials to avoid
Strong acids.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

Exposure Guidelines
No exposure limit allocated

Biological standards
No biological limit allocated
Occupational exposure controls

Engineering Controls  No standards established for this product

Environmental exposure controls  No information available.

Personal Protective Equipment

Considerations to aid the user in PPE assessments in line with expected use follow below. However in certain circumstances the user must determine if additional protective equipment is required. If exposure limits are exceeded or irritation is experienced, locally approved respiratory protection should be worn. Positive-pressure supplied air respirators may be required if high airborne contaminant concentrations as a result of the use of the product. Proper skin and eye protection should also be determined by the user and provided in accordance with current local regulations.

| Flash point   | No data available |
| Upper explosion limit | No data available |

| Appearance     | Tape |
| Odour          | Odourless; Mild Acrylic |
| Water solubility| Insoluble in water |
| Vapor density  | No data available |
| Melting point/range | No data available |
| Autoignition temperature | No data available |
| Lower explosion limit | No data available |

10. STABILITY AND REACTIVITY

Stability  Stable.

Conditions to avoid  No information available.

Materials to avoid  Strong acids.

Hazardous decomposition products  Carbon oxides. Thermal decomposition can lead to release of irritating gases and vapors.

Possibility of Hazardous Reactions  Hazardous polymerisation does not occur

11. TOXICOLOGICAL INFORMATION

Local effects  No information available.

Target Organ Effects  No information available.

Acute toxicity

Potential health effects

Inhalation  No information available.

Eye contact  No information available.
Skin contact  No information available.
Ingestion  Not a normal route of exposure.

**Specific effects**
- **Carcinogenic effects**  No information available.
- **Mutagenic effects**  No information available.
- **Reproductive toxicity**  No information available.

### 12. ECOLOGICAL INFORMATION

**Ecotoxicity effects**  No information available.
- **Persistence and degradability**  None known
- **Mobility in Environmental Media**  None known
- **Bioaccumulation**  None known

### 13. DISPOSAL CONSIDERATIONS

**Waste disposal methods**  Dispose of in accordance with local regulations.
**Contaminated packaging**  Empty containers should be taken for local recycling, recovery or waste disposal.

### 14. TRANSPORT INFORMATION

Not regulated for transport.

### 15. REGULATORY INFORMATION

All known constituents of this product are listed in the Australian Inventory of Chemical Substances (AICS)

**Carcinogenic substances**  None listed

### 16. OTHER INFORMATION

**Revision Date**  2016-12-12
**Reason for revision**  Converted to GHS format.
**Prepared By**  Pyrotek Pty. Ltd.

1. IDENTIFICATION OF THE SUBSTANCE/PREPARATION AND OF THE COMPANY/UNDERTAKING

Product code 17207 - MSP15
Product name FIXSEAL MSP 15
Product description Adhesive for Reapor and Viterolite installations, MSP15.
Product use Mounting adhesive.

Manufacturer or supplier's details
Pyrotek Pty. Ltd.
147-149 Magowar Road
Girraween
NSW 2145
Australia
Pyrotek (61) (0)2 9631 1333
Fax: (61) (0)2 9631-0233
Email: SDS@pyrotek-inc.com REACH email: REACH@pyrotek-inc.com

Emergency telephone number Chemtrec 1800 752 022 (24 hrs), Pyrotek Australia 1800 679 422

2. HAZARDS IDENTIFICATION

Classification according to EU Regulation EC 1272/2008 (GHS)
Not a hazardous substance or mixture according to the Globally Harmonised System (GHS)

Classification according to EU Directives 67/548/EEC or 1999/45/EC [Australian NOHSC: 1008 (2004)]

Poison Schedule Number No information available

3. COMPOSITION/INFORMATION ON INGREDIENTS

All other ingredients determined not to be hazardous according to NOHSC / GHS criteria

4. FIRST AID MEASURES
General advice
If symptoms persist, call a physician.

Inhalation
Move to fresh air in case of accidental inhalation of vapors or decomposition products.

Skin contact
Wash off immediately with soap and plenty of water removing all contaminated clothes and shoes.

Eye contact
In the case of contact with eyes, rinse immediately with plenty of water and seek medical advice.

Ingestion
DO NOT induce vomiting. Rinse nose, mouth and throat with water. Seek medical advise.

Aggravated Medical Conditions
No information available.

Notes to physician
No information available.

For advice, contact Poisons Information Centre
In Australia, call Tel: 13 1126
In New Zealand, call Tel: 034747000

5. FIRE-FIGHTING MEASURES

Flammable properties
None known.

Suitable extinguishing media
Water, Foam, Dry powder, carbon dioxide (CO2)

Unsuitable Extinguishing Media
None known.

Special exposure hazards in a fire
No information available.

Specific hazards arising from the chemical
None known.

Protective equipment and precautions for firefighters
As in any fire, wear self-contained breathing apparatus pressure-demand, MSHA/NIOSH (approved or equivalent) and full protective gear.

Australian Hazchem Code
None known

6. ACCIDENTAL RELEASE MEASURES

Personal precautions
Slippery, can cause falls if walked on. Use personal protective equipment.

Environmental precautions
Do not allow undiluted product or large quantities of it to reach ground water, water bodies or sewage system.

Methods for cleaning up
If recovery is not feasible, admix with dry soil, sand or non-reactive absorbent and place in an appropriate chemical waste container.

7. HANDLING AND STORAGE

Handling
Ensure product is dry before use. Keep containers closed when empty. Handle in accordance with good industrial hygiene and safety practice.

Storage
Storage between 39-90 °F (4-32 °C).

Materials to avoid
No information available.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION
Exposure Guidelines  
No exposure limit allocated

Biological standards  
No biological limit allocated

Occupational exposure controls

Engineering Controls  
Ensure adequate ventilation, especially in confined areas

Environmental exposure controls  
No information available.

Personal Protective Equipment

Considerations to aid the user in PPE assessments in line with expected use follow below. However in certain circumstances the user must determine if additional protective equipment is required.
If exposure limits are exceeded or irritation is experienced, locally approved respiratory protection should be worn.
Positive-pressure supplied air respirators may be required if high airborne contaminant concentrations as a result of the use of the product. Proper skin and eye protection should also be determined by the user and provided in accordance with current local regulations.

Eye protection  
Avoid contact with eyes

Respiratory protection  
No special protective equipment required.

Skin Protection  
Long sleeved clothing.

General industrial hygiene practice  
Handle in accordance with good industrial hygiene and safety practice.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance  
Paste

Odour  
Mild

Solubility  
Soluble in organic solvents

Density  
Ca. 1.67 g/cm³

Vapor density  
No data available

Melting point/range  
No data available

Autoignition temperature  
No data available

Lower explosion limit  
No data available

Colour  
White; Various

pH value  
No data available

Water solubility  
Insoluble in water

Vapor pressure  
No data available

Boiling point/range  
No data available

Flash point  
No data available

Upper explosion limit  
No data available

Viscosity  
Thixotropic paste

10. STABILITY AND REACTIVITY

Stability  
Stable under recommended storage conditions.

Conditions to avoid  
Exposure to air or moisture over prolonged periods. Exposure to moisture. Extremes of temperature and direct sunlight.

Materials to avoid  
No information available.

Hazardous decomposition products  
Thermal decomposition can lead to release of irritating gases and vapors.

Possibility of Hazardous Reactions  
No information available

11. TOXICOLOGICAL INFORMATION

Local effects  
No information available.

Target Organ Effects  
No information available.

Acute toxicity

Potential health effects

**Inhalation**  
No information available.

**Eye contact**  
No information available.

**Skin contact**  
No information available.

**Ingestion**  
No information available.

Specific effects

**Carcinogenic effects**  
No information available.

**Mutagenic effects**  
No information available.

**Reproductive toxicity**  
No information available.

12. ECOLOGICAL INFORMATION

**Ecotoxicity effects**  
The product should not be allowed to enter drains, water courses or the soil.

**Persistence and degradability**  
None known

**Mobility in Environmental Media**  
None known

**Bioaccumulation**  
None known

13. DISPOSAL CONSIDERATIONS

**Waste disposal methods**  
Should not be released into the environment. Dispose of in accordance with local regulations.

**Contaminated packaging**  
Empty containers should be taken for local recycling, recovery or waste disposal.

14. TRANSPORT INFORMATION

Not regulated for transport.

15. REGULATORY INFORMATION

**International Inventories**

**Carcinogenic substances**  
None listed

16. OTHER INFORMATION

**Revision Date**  
2016-12-14

**Reason for revision**  
The Safety Datasheets for the products you have purchased have been updated with important new information concerning safety, health or environmental protection.
